

Shock Absorbers and Rate Controls

ENIDINE

Under the Enidine brand, we are a global leader in the design and manufacture of standard and custom energy absorption and vibration isolation product solutions. Product ranges include shock absorbers, rate controls, air springs, wire rope isolators, heavy duty buffers and emergency stops.

From Original Equipment Manufacturers (OEM) to aftermarket applications, we offer a unique combination of product selection, engineering excellence and technical support to meet the toughest energy absorption requirements.

**Industry leading energy
absorption and vibration
isolation solutions.**

-----------------------------	-----

With its world headquarters located in Orchard Park, New York, USA, **ITT ENIDINE Inc.** is a world leader in the design and manufacture of standard and custom energy absorption and vibration isolation product solutions within the Industrial, Aerospace, Defense, Marine and Rail markets. Product ranges include shock absorbers, gas springs, rate controls, air springs, wire rope isolators, heavy industry buffers and emergency stops. With facilities strategically located throughout the world and in partnership with our vast global network of distributors, Enidine Incorporated continues to strengthen its presence within marketplace.

Founded in 1966, ITT Enidine Incorporated now has close to 600 employees located throughout the globe in the United States, Germany, France, Japan, China and Korea. With a team of professionals in engineering, computer science, manufacturing, production and marketing our employees provide our customers the very best in service and application solutions.

“ITT Enidine is widely recognized as the preferred source for energy absorption and vibration isolation products.”

From Original Equipment Manufacturers (OEM) to aftermarket applications, ITT Enidine offers a unique combination of product selection, engineering excellence and technical support to meet even the toughest energy absorption application requirements.

Global Manufacturing and Sales Facilities offer our customers:

- ***Highly Trained Distribution Network***
- ***State-of-the Art Engineering Capabilities***
- ***Custom Solution Development***
- ***Customer Service Specialists***
- ***Multiple Open Communication Channels***

If you are unsure whether one of our standard products meets your requirements, feel free to speak with one of our technical representatives **toll-free at 1-800-852-8508**, or contact us via **e-mail at techsales@enidine.com**.

Products/Engineering/Technical Support

ITT Enidine continually strives to provide the widest selection of shock absorbers and rate control products in the global marketplace. Through constant evaluation and testing, we bring our customers the most cost effective products with more features, greater performance and improved ease of use.

ITT Enidine engineers continue to monitor and influence trends in the motion control industry, allowing us to remain at the forefront of new energy absorption product development such as our new ECO Series shock absorbers and our new HDN Series shock Absorbers.

Our experienced engineering team has designed custom solutions for a wide variety of challenging applications, including automated warehousing systems and shock absorbers for hostile industrial environments such as glass manufacturing, among others. These custom application solutions have proven to be critical to our customers' success. Let ITT Enidine engineers do the same for you.

Custom designs are not an exception at ITT Enidine, they are an integral part of our business. Should your requirements fit outside of our standard product range, Enidine engineers can assist in developing special finishes, components, hybrid technologies and new designs to ensure a "best-fit" product solution customized to your exact specifications.

A talented engineering staff works to design and maintain the most efficient energy absorption product lines available today, using the latest engineering tools:

- **Solid Modeling**
- **3-D CAD Drawings**
- **3-D Soluable Support Technology**
- **Finite Element Analysis**
- **Complete Product Verification Testing Facility**

New product designs get to market fast because they can be fully developed in virtual environments before a prototype is ever built. This saves time and lets us optimize the best solution using real performance criteria.

Global Service and Support

ITT Enidine offers its customers a global network of customer service staff technical sales personnel that are available to assist you with all of your application needs.

- Operating with lean manufacturing and cellular production, ITT Enidine produces higher quality custom and standard products with greater efficiency and within shorter lead times.
- An authorized Global Distribution Network is trained regularly by ITT Enidine staff on new products and services ensuring they are better able to serve you.
- **New Enisize sizing portal provides our customer with the necessary sizing and design tools. www.enisize.com**
- Global operations in United States, Germany, France, China, Japan and Korea.
- A comprehensive, website full of application information, technical data, sizing examples and information to assist in selecting the product that's right for you.

Our website also features a searchable worldwide distributor lookup to help facilitate fast, localized service. Contact us today for assistance with all of your application needs.

Our global customer service and technical sales departments are available to assist you find the solution that's right for your application needs. Call us at 1.800.852.8508 or e-mail us at industrialsales@enidine.com and let us get started today.

As companies strive to increase productivity by operating machinery at higher speeds, often the results are increased noise, damage to machinery/products, and excessive vibration. At the same time, safety and machine reliability are decreased. A variety of products are commonly used to solve these problems. However, they vary greatly in effectiveness and operation. Typical products used include rubber bumpers, springs, cylinder cushions and shock absorbers. The following illustrations compare how the most common products perform:

All moving objects possess kinetic energy. The amount of energy is dependent upon weight and velocity. A mechanical device that produces forces diametrically opposed to the direction of motion must be used to bring a moving object to rest.

Rubber bumpers and springs, although very inexpensive, have an undesirable recoil effect. Most of the energy absorbed by these at impact is actually stored. This stored energy is returned to the load, producing rebound and the potential for damage to the load or machinery. Rubber bumpers and springs initially provide low resisting force which increases with the stroke.

Cylinder cushions are limited in their range of operation. Most often they are not capable of absorbing energy generated by the system. By design, cushions have a relatively short stroke and operate at low pressures resulting in very low energy absorption. The remaining energy is transferred to the system, causing shock loading and vibration.

Shock absorbers provide controlled, predictable deceleration. These products work by converting kinetic energy to thermal energy. More specifically, motion applied to the piston of a hydraulic shock absorber pressurizes the fluid and forces it to flow through restricting orifices, causing the fluid to heat rapidly. The thermal energy is then transferred to the cylinder body and harmlessly dissipated to the atmosphere.

The advantages of using shock absorbers include:

- 1. Longer Machine Life** – The use of shock absorbers significantly reduces shock and vibration to machinery. This eliminates machinery damage, reduces downtime and maintenance costs, while increasing machine life.
- 2. Higher Operating Speeds** – Machines can be operated at higher speeds because shock absorbers control or gently stop moving objects. Therefore, production rates can be increased.
- 3. Improved Production Quality** – Harmful side effects of motion, such as noise, vibration and damaging impacts, are moderated or eliminated so the quality of production is improved. Therefore, tolerances and fits are easier to maintain.
- 4. Safer Machinery Operation** – Shock absorbers protect machinery and equipment operators by offering predictable, reliable and controlled deceleration. They can also be designed to meet specified safety standards, when required.
- 5. Competitive Advantage** – Machines become more valuable because of increased productivity, longer life, lower maintenance costs and safer operation.

Automotive vs. Industrial Shock Absorbers

It is important to understand the differences that exist between the standard automotive-style shock absorber and the industrial shock absorber.

The automotive style employs the defllective beam and washer method of orificing. Industrial shock absorbers utilize single orifice, multi-orifice and metering pin configurations. The automotive type maintains a damping force which varies in direct proportion to the velocity of the piston, while the damping force in the industrial type varies in proportion to the square of the piston velocity. In addition, the damping force of the automotive type is independent of the stroke position while the damping force associated with the industrial type can be designed either dependent or independent of stroke position.

AUTOMOTIVE TYPE SHOCK ABSORBER

INDUSTRIAL TYPE SHOCK ABSORBER

Equally as important, automotive-style shock absorbers are designed to absorb only a specific amount of input energy. This means that, for any given geometric size of automotive shock absorber, it will have a limited amount of absorption capability compared to the industrial type.

This is explained by observing the structural design of the automotive type and the lower strength of materials commonly used. These materials can withstand the lower pressures commonly found in this type. The industrial shock absorber uses higher strength materials, enabling it to function at higher damping forces.

Adjustment Techniques

A properly adjusted shock absorber safely dissipates energy, reducing damaging shock loads and noise levels. For optimum adjustment setting see useable adjustment setting graphs. Watching and "listening" to a shock absorber as it functions aids in proper adjustment.

To correctly adjust a shock absorber, set the adjustment knob at zero (0) prior to system engagement. Cycle the mechanism and observe deceleration of the system.

If damping appears too soft (unit strokes with no visual deceleration and bangs at end of stroke), move indicator to next largest number. Adjustments must be made in gradual increments to avoid internal damage to the unit (e.g., adjust from 0 to 1, not 0 to 4).

Increase adjustment setting until smooth deceleration or control is achieved and negligible noise is heard when the system starts either to decelerate or comes to rest.

When abrupt deceleration occurs at the beginning of the stroke (banging at impact), the adjustment setting must be moved to a lower number to allow smooth deceleration.

If the shock absorber adjustment knob is set at the high end of the adjustment scale and abrupt deceleration occurs at the end of the stroke, a larger unit may be required.

Shock Absorber Performance When Weight or Impact Velocity Vary

When conditions change from the original calculated data or actual input, a shock absorber's performance can be greatly affected, causing failure or degradation of performance. Variations in input conditions after a shock absorber has been installed can cause internal damage, or at the very least, can result in unwanted damping performance. Variations in weight or impact velocity can be seen by examining the following energy curves:

Varying Impact Weight: Increasing the impact weight (impact velocity remains unchanged), without reorificing or readjustment will result in increased damping force at the end of the stroke. Figure 1 depicts this undesirable bottoming peak force. This force is then transferred to the mounting structure and impacting load.

Figure 1

Varying Impact Velocity: Increasing impact velocity (weight remains the same) results in a radical change in the resultant shock force. Shock absorbers are velocity conscious products; therefore, the critical relationship to impact velocity must be carefully monitored. Figure 2 depicts the substantial change in shock force that occurs when the velocity is increased. Variations from original design data or errors in original data may cause damage to mounting structures and systems, or result in shock absorber failure if the shock force limits are exceeded.

Figure 2

Shock Absorber Sizing Examples

Typical Shock Absorber Applications

Overview

SHOCK ABSORBER SIZING

Follow the next six steps to manually size Enidine shock absorbers:

STEP 1: Identify the following parameters. These must be known for all energy absorption calculations. Variations or additional information may be required in some cases.

- Weight of the load to be stopped (lbs.)(Kg).
- Velocity of the load upon impact with the shock absorber (in./sec.)(m/s).
- External (propelling) forces acting on the load (lbs.)(N), if any.
- Cyclic frequency at which the shock absorber will operate.
- Orientation of the application's motion (i.e. horizontal, vertical up, vertical down, inclined, rotary horizontal, rotary vertical up, rotary vertical down).

NOTE: For rotary applications, it is necessary to determine both the radius of gyration (K) and the mass moment of inertia (I). Both of these terms locate the mass of a rotating object with respect to the pivot point. It is also necessary to determine the angular velocity (ω) and the torque (T).

STEP 2: Calculate the kinetic energy of the moving object.

$$E_k = \frac{W}{772} \times V^2 \text{ (linear)} \text{ or } E_k = \frac{1}{2} \omega^2 \text{ (rotary)} \text{ or } E_k = \frac{1}{2} MV^2 \text{ (metric)}$$

(Note: 772 = 2 x acceleration due to gravity)

Utilizing the Product Locators for Shock Absorbers located at the beginning of each product family section, select a model, either adjustable or non-adjustable, with a greater energy per cycle capacity than the value just calculated.

STEP 3: Calculate the work energy input from any external (propelling) forces acting on the load, using the stroke of the model selected in Step 2.

$$E_w = F_D \times S \text{ (linear)} \text{ or } E_w = \frac{T}{R_S} \times S \text{ (rotary)}$$

Caution: The propelling force must not exceed the maximum propelling force listed for the model chosen. If the propelling force is too high, select a larger model and recalculate the work energy.

STEP 4: Calculate the total energy per cycle $E_T = E_K + E_W$

The model selected must have at least this much energy capacity. If not, select a model with greater energy capacity and return to Step 3.

STEP 5: Calculate the energy that must be absorbed per hour. Even though the shock absorber can absorb the energy in a single impact, it may not be able to dissipate the heat generated if the cycle rate is too high.

$$E_T C = E_T \times C$$

The model selected must have an energy per hour capacity greater than this calculated figure. If it is not greater, there are two options:

- Choose another model that has more energy per hour capacity (because of larger diameter or stroke). Keep in mind that if the stroke changes, you must return to Step 3.
- Use an Air/Oil Tank. The increased surface area of the tank and piping will increase the energy per hour capacity by 20 percent.

STEP 6: If you have selected an HP, PM, SPM, TK, or PRO Series model, refer to the sizing graph(s) in the appropriate series section to determine the required damping constant. If the point cannot be found in the sizing graph, you must select a larger model or choose a different series. Note that if the stroke changes, you must return to Step 3.

If you have selected an adjustable model (OEM, HP or HDA series), refer to the Useable Adjustment Setting Range graph for the chosen model. The impact velocity must fall within the limits shown on the graph.

RATE CONTROL SIZING

Follow the next five steps to manually size ITT Enidine rate controls:

STEP 1: Identify the following parameters. These must be known for all rate control calculations. Variations or additional information may be required in some cases.

- Weight of the load to be controlled (lbs.)(Kg)
- Desired velocity of the load (in./sec.)(m/s)
- External (propelling) force acting on the load (lbs.)(N), if any.
- Cyclic frequency at which the rate control will operate.
- Orientation of the application's motion (i.e. horizontal, vertical up, vertical down, inclined, rotary horizontal, rotary vertical up, rotary vertical down.)
- Damping direction (i.e., tension [T], compression [C] or both [T and C]).
- Required stroke (in.)(mm)

STEP 2: Calculate the propelling force at the rate control in each direction damping is required. (See sizing examples on page 6-12).

CAUTION: The propelling force in each direction must not exceed the maximum propelling force listed for the chosen model. If the propelling force is too high, select a larger model.

STEP 3: Calculate the total energy per cycle

$$E_T = E_W \text{ (tension)} + E_W \text{ (compression)} \\ E_W = F_D \times S$$

STEP 4: Calculate the total energy per hour

$$E_T C = E_T \times C$$

The model selected must have an energy per hour capacity greater than this calculated figure. If not, choose a model with a higher energy per hour capacity.

Compare the damping direction, stroke, propelling force, and total energy per hour to the values listed in the Rate Controls Engineering Data Charts (pages 97-106).

STEP 5: If you have selected a rate control, refer to the sizing graphs in the Rate Controls section to determine the required damping constant.

If you have selected an adjustable model (ADA), refer to the Useable Adjustment Setting Range graph for the chosen model. The desired velocity must fall within the limits shown on the graph.

Shock Absorber Sizing Examples

Typical Shock Absorber Applications

Overview

SYMBOLS

- a = Acceleration (in./sec.²)(m/s²)
- A = Width (in.)(m)
- B = Thickness (in.)(m)
- C = Number of cycles per hour
- d = Cylinder bore diameter (in.)(mm)
- D = Distance (in.)(m)
- E_K = Kinetic energy (in-lbs.)(Nm)
- E_T = Total energy per cycle (in-lbs./c)(Nm/c), E_K + E_W
- E_TC = Total energy to be absorbed per hour (in-lbs./hr)(Nm/hr)
- E_W = Work or drive energy (in-lbs.)(Nm)
- F_D = Propelling force (lbs.)(N)
- F_P = Shock force (lbs.)(N)
- H = Height (in.)(m)
- Hp = Motor rating (hp)(kw)
- I = Mass moment of inertia (in-lbs./sec²)(Kg m²)
- K = Radius of gyration (in.)(m)
- L = Length (in.)(m)
- P = Operating pressure (psi)(bar)
- R_S = Mounting distance from pivot point (in.)(m)
- S = Stroke of shock absorber (in.)(m)
- t = Time (sec.)
- T = Torque (in-lbs.)(Nm)
- V = Impact velocity (in./sec.)(m/s)
- W = Weight (lbs.)(Kg)

- α = Angle of incline (degrees)
- θ = Start point from true vertical 0° (degrees)
- μ = Coefficient of friction
- ∅ = Angle of rotation (degrees)
- ω = Angular velocity (radians/sec)

USEFUL FORMULAS

1. To Determine Shock Force

$$F_P = \frac{E_T}{S \times .85}$$

For PRO and PM Series only, use

$$F_P = \frac{E_T}{S \times .50}$$

2. To Determine Impact Velocity

A. If there is no acceleration (V is constant) (e.g., load being pushed by hydraulic cylinder or motor driven.)

$$V = \frac{D}{t}$$

B. If there is acceleration. (e.g., load being pushed by air cylinder)

$$V = \frac{2 \times D}{t}$$

3. To Determine Propelling Force Generated by Electric Motor

$$F_D = \frac{19,800 \times Hp}{V} \quad F_D = \frac{3,000 \times Hp}{V} \text{ (metric)}$$

4. To Determine Propelling Force of Pneumatic or Hydraulic Cylinders

$$F_D = .7854 \times d^2 \times P \quad F_D = 0.07854 \times d^2 \times P \text{ (metric)}$$

5. Free Fall Applications

A. Find Velocity for a Free Falling Weight:

$$V = \sqrt{772 \times H} \quad V = \sqrt{19.6 \times H} \text{ (metric)}$$

B. Kinetic Energy of Free Falling Weight:

$$E_K = W \times H$$

6. Deceleration and G Load

A. To Determine Approximate G Load with a Given Stroke

$$G = \frac{F_P - F_D}{W} \quad G = \frac{F_P - F_D}{kg \times 9.81} \text{ (metric)}$$

B. To Determine the Approximate Stroke with a Given G Load (Conventional Damping Only)

$$S = \frac{E_K}{GW \times .85 \times .15 F_D}$$

*For PRO/PM and TK Models:

$$S = \frac{E_K}{GW \times .5 \times .5 F_D}$$

NOTE: Constants are printed in bold.

The following examples are shown using Imperial formulas and units of measure.

Shock Absorbers

EXAMPLE 1:

Vertical Free Falling Weight

STEP 1: Application Data

- (W) Weight = 3,400 lbs.
- (H) Height = 20 in.
- (C) Cycles/Hr = 2

STEP 2: Calculate kinetic energy

$$E_K = W \times H$$

$$E_K = 3,400 \times 20 = 68,000 \text{ in-lbs.}$$

Assume Model OEM 4.0M x 6 is adequate (Page 31).

STEP 3: Calculate work energy

$$E_W = W \times S$$

$$E_W = 3,400 \times 6$$

$$E_W = 20,400 \text{ in-lbs.}$$

STEP 4: Calculate total energy per cycle

$$E_T = E_K + E_W$$

$$E_T = 68,000 + 20,400$$

$$E_T = 88,400 \text{ in-lbs./c}$$

STEP 5: Calculate total energy per hour

$$E_{TC} = E_T \times C$$

$$E_{TC} = 88,400 \times 2$$

$$E_{TC} = 176,800 \text{ in-lbs./hr}$$

STEP 6: Calculate impact velocity and confirm selection

$$V = \sqrt{772 \times H}$$

$$V = \sqrt{772 \times 20}$$

$$V = 124 \text{ in./sec.}$$

Model OEM 4.0M x 6 is adequate.

EXAMPLE 2:

Vertical Moving Load with Propelling Force Downward

STEP 1: Application Data

- (W) Weight = 3,400 lbs.
- (V) Velocity = 80 in./sec.
- (d) Cylinder bore dia. = 4 in.
- (P) Pressure = 70 psi
- (C) Cycles/Hr = 200

STEP 2: Calculate kinetic energy

$$E_K = \frac{W}{772} \times V^2 = \frac{3,400}{772} \times 80^2$$

$$E_K = 28,187 \text{ in-lbs.}$$

Assume Model OEM 4.0M x 4 is adequate (Page 31).

STEP 3: Calculate work energy

$$F_D = [.7854 \times d^2 \times P] + W$$

$$F_D = [.7854 \times 4^2 \times 70] + 3,400$$

$$F_D = 4,280 \text{ lbs.}$$

$$E_W = F_D \times S$$

$$E_W = 4,280 \times 4$$

$$E_W = 17,120 \text{ in-lbs.}$$

STEP 4: Calculate total energy per cycle

$$E_T = E_K + E_W$$

$$E_T = 28,187 + 17,120$$

$$E_T = 45,307 \text{ in-lbs./c}$$

STEP 5: Calculate total energy per hour

$$E_{TC} = E_T \times C$$

$$E_{TC} = 45,307 \times 200$$

$$E_{TC} = 9,061,400 \text{ in-lbs./hr}$$

Model OEM 4.0M x 4 is adequate.

EXAMPLE 3: Vertical Moving Load with Propelling Force Upward

STEP 1: Application Data

(W) Weight = 3,400 lbs.
(V) Velocity = 80 in./sec.
(d) 2 Cylinders bore dia. = 6 in.
(P) Operating pressure = 70 psi
(C) Cycles/Hr = 200

STEP 2: Calculate kinetic energy

$$E_K = \frac{W}{772} \times V^2 = \frac{3,400}{772} \times 80^2$$

$$E_K = 28,187 \text{ in-lbs.}$$

Assume Model OEM 3.0M x 5 is adequate (Page 31).

STEP 3: Calculate work energy

$$F_D = 2 \times [.7854 \times d^2 \times P] - W$$

$$F_D = 2 \times [.7854 \times 6^2 \times 70] - 3,400$$

$$F_D = 558 \text{ lbs.}$$

$$E_W = F_D \times S$$

$$E_W = 558 \times 5$$

$$E_W = 2,790 \text{ in-lbs.}$$

STEP 4: Calculate total energy per cycle

$$E_T = E_K + E_W$$

$$E_T = 28,187 + 2,790$$

$$E_T = 30,977 \text{ in-lbs./c}$$

STEP 5: Calculate total energy per hour

$$E_{TC} = E_T \times C$$

$$E_{TC} = 30,977 \times 200$$

$$E_{TC} = 6,195,400 \text{ in-lbs./hr}$$

Model OEM 3.0M x 5 is adequate.

EXAMPLE 4: Vertical Moving Load with Propelling Force from Motor

(e.g., Load Moving Force Up)

STEP 1: Application Data

(W) Weight = 200 lbs.
(V) Velocity = 60 in./sec.
(Hp) Motor horsepower = 1.5 Hp
(C) Cycles/Hr = 100

STEP 2: Calculate kinetic energy

$$E_K = \frac{W}{772} \times V^2 = \frac{200}{772} \times 60^2$$

$$E_K = 933 \text{ in-lbs.}$$

CASE A: UP

STEP 3: Calculate work energy

$$F_D = \frac{19,800 \times \text{Hp} - W}{V}$$

$$F_D = \frac{19,800 \times 1.5 - 200}{60}$$

$$F_D = 295 \text{ lbs.}$$

Assume Model OEM 1.25 x 2 is adequate (Page 24).

$$E_W = F_D \times S$$

$$E_W = 295 \times 2$$

$$E_W = 590 \text{ in-lbs.}$$

STEP 4: Calculate total energy per cycle

$$E_T = E_K + E_W$$

$$E_T = 933 + 590$$

$$E_T = 1,523 \text{ in-lbs./c}$$

STEP 5: Calculate total energy per hour

$$E_{TC} = E_T \times C$$

$$E_{TC} = 1,523 \times 100$$

$$E_{TC} = 152,300 \text{ in-lbs./hr}$$

Model OEM 1.25 x 2 is adequate.

CASE B: DOWN

STEP 3: Calculate work energy

$$F_D = \frac{19,800 \times \text{Hp} + W}{V}$$

$$F_D = \frac{19,800 \times 1.5 + 200}{60}$$

$$F_D = 695 \text{ lbs.}$$

Assume Model OEMXT 2.0M x 2 is adequate (Page 29).

$$E_W = F_D \times S$$

$$E_W = 695 \times 2$$

$$E_W = 1,390 \text{ in-lbs.}$$

STEP 4: Calculate total energy per cycle

$$E_T = E_K + E_W$$

$$E_T = 933 + 1,390$$

$$E_T = 2,323 \text{ in-lbs./c}$$

STEP 5: Calculate total energy per hour

$$E_{TC} = E_T \times C$$

$$E_{TC} = 2,323 \times 100$$

$$E_{TC} = 232,300 \text{ in-lbs./hr}$$

Model OEMXT 2.0M x 2 is adequate.

EXAMPLE 5: Horizontal Moving Load

STEP 1: Application Data

(W) Weight = 1,950 lbs.
(V) Velocity = 60 in./sec.
(C) Cycles/Hr = 200

STEP 2: Calculate kinetic energy

$$E_K = \frac{W}{772} \times V^2$$

$$E_K = \frac{1,950}{772} \times 60^2$$

$$E_K = 9,093 \text{ in-lbs.}$$

Assume Model OEMXT 2.0M x 2 is adequate (Page 29).

STEP 3: Calculate work energy: N/A

STEP 4: Calculate total energy per cycle

$$E_T = E_K = 9,093 \text{ in-lbs./c}$$

STEP 5: Calculate total energy per hour

$$E_{TC} = E_T \times C$$

$$E_{TC} = 9,093 \times 200$$

$$E_{TC} = 1,818,600 \text{ in-lbs./hr}$$

Model OEMXT 2.0M x 2 is adequate.

Shock Absorber Sizing Examples

Typical Shock Absorber Applications

Overview

EXAMPLE 6: Horizontal Moving Load with Propelling Force

STEP 1: Application Data

- (W) Weight = 1,950 lbs.
- (V) Velocity = 60 in./sec.
- (d) Cylinder bore dia. = 3 in.
- (P) Operating pressure = 70 psi
- (C) Cycles/Hr = 200

STEP 2: Calculate kinetic energy

$$E_K = \frac{W}{772} \times V^2$$

$$E_K = \frac{1,950}{772} \times 60^2$$

$$E_K = 9,093 \text{ in-lbs.}$$

Assume Model OEMXT 2.0M x 2 is adequate (Page 29).

STEP 3: Calculate work energy

$$F_D = .7854 \times d^2 \times P$$

$$F_D = .7854 \times 3^2 \times 70$$

$$F_D = 495 \text{ lbs.}$$

$$E_W = F_D \times S$$

$$E_W = 495 \times 2$$

$$E_W = 990 \text{ in-lbs.}$$

STEP 4: Calculate total energy per cycle

$$E_T = E_K + E_W$$

$$E_T = 9,093 + 990$$

$$E_T = 10,083 \text{ in-lbs./c}$$

STEP 5: Calculate total energy per hour

$$E_T C = E_T \times C$$

$$E_T C = 10,083 \times 200$$

$$E_T C = 2,016,600 \text{ in-lbs./hr}$$

Model OEMXT 2.0M x 2 is adequate.

EXAMPLE 7: Horizontal Moving Load, Motor Driven

STEP 1: Application Data

- (W) Weight = 2,200 lbs.
- (V) Velocity = 60 in./sec.
- (Hp) Motor horsepower = 1.5 Hp
- (C) Cycles/Hr = 120

STEP 2: Calculate kinetic energy

$$E_K = \frac{W}{772} \times V^2$$

$$E_K = \frac{2,200}{772} \times 60^2$$

$$E_K = 10,259 \text{ in-lbs}$$

Assume Model OEMXT 2.0M x 2 is adequate (Page 29).

STEP 3: Calculate work energy

$$F_D = \frac{19,800 \times \text{Hp}}{V}$$

$$F_D = \frac{19,800 \times 1.5}{60}$$

$$F_D = 495 \text{ lbs.}$$

$$E_W = F_D \times S$$

$$E_W = 495 \times 2$$

$$E_W = 990 \text{ in-lbs.}$$

STEP 4: Calculate total energy per cycle

$$E_T = E_K + E_W$$

$$E_T = 10,259 + 990$$

$$E_T = 11,249 \text{ in-lbs./c}$$

STEP 5: Calculate total energy per hour

$$E_T C = E_T \times C$$

$$E_T C = 11,249 \times 120$$

$$E_T C = 1,349,880 \text{ in-lbs./hr}$$

Model OEMXT 2.0M x 2 is adequate.

EXAMPLE 8: Free Moving Load Down an Inclined Plane

STEP 1: Application Data

- (W) Weight = 550 lbs.
- (H) Height = 8 in.
- (alpha) Angle of incline = 30°
- (C) Cycles/Hr = 250

STEP 2: Calculate kinetic energy

$$E_K = W \times H$$

$$E_K = 550 \times 8$$

$$E_K = 4,400 \text{ in-lbs.}$$

Assume Model OEMXT 1.5M x 3 is adequate (Page 27).

STEP 3: Calculate work energy

$$F_D = W \times \sin \alpha$$

$$F_D = 550 \times .5$$

$$F_D = 275 \text{ lbs.}$$

$$E_W = F_D \times S$$

$$E_W = 275 \times 3$$

$$E_W = 825 \text{ in-lbs.}$$

STEP 4: Calculate total energy per cycle

$$E_T = E_K + E_W$$

$$E_T = 4,400 + 825$$

$$E_T = 5,225 \text{ in-lbs./c}$$

STEP 5: Calculate total energy per hour

$$E_T C = E_T \times C$$

$$E_T C = 5,225 \times 250$$

$$E_T C = 1,306,250 \text{ in-lbs./hr}$$

STEP 6: Calculate impact velocity and confirm selection

$$V = \sqrt{772 \times H}$$

$$V = \sqrt{772 \times 8} = 79 \text{ in./sec.}$$

Model OEMXT 1.5M x 3 is adequate.

Shock Absorber Sizing Examples

Typical Shock Absorber Applications

Overview

EXAMPLE 9:
Horizontal Rotating Mass**STEP 1: Application Data**

(W) Weight = 200 lbs.
 (ω) Angular velocity = 1.5 rad./sec.
 (T) Torque = 1,065 in-lbs.
 (K) Radius of gyration = 15 in.
 (R_S) Mounting radius = 20 in.
 (C) Cycles/Hr = 120

STEP 2: Calculate kinetic energy

$$I = \frac{W}{386} \times K^2$$

$$I = \frac{200}{386} \times 15^2$$

$$I = 117 \text{ in-lbs./sec.}^2$$

$$E_K = \frac{I \times \omega^2}{2}$$

$$E_K = \frac{117 \times 1.5^2}{2}$$

$E_K = 132 \text{ in-lbs.}$
 Assume Model STH .5M is adequate
 (Page 40).

STEP 3 Calculate work energy

$$F_D = \frac{T}{R_S}$$

$$F_D = \frac{1,065}{20}$$

$$F_D = 53 \text{ lbs.}$$

$$E_W = F_D \times S$$

$$E_W = 53 \times .5$$

$$E_W = 27 \text{ in-lbs.}$$

STEP 4: Calculate total energy per cycle

$$E_T = E_K + E_W$$

$$E_T = 132 + 27$$

$$E_T = 159 \text{ in-lbs./c}$$

STEP 5: Calculate total energy per hour

$$E_{TC} = E_T \times C$$

$$E_{TC} = 159 \times 120$$

$$E_{TC} = 19,080 \text{ in-lbs./hr}$$

Model STH .5M is adequate.

EXAMPLE 10:
Horizontal Rotating Door**STEP 1: Application Data**

(W) Weight = 50 lbs.
 (ω) Angular velocity = 2.5 rad./sec.
 (T) Torque = 100 in-lbs.
 (R_S) Mounting radius = 20 in.
 (A) Width = 40 in.
 (B) Thickness = .5 in.
 (C) Cycles/Hr = 250

STEP 2: Calculate kinetic energy

$$K = .289 \times \sqrt{4 \times A^2 + B^2}$$

$$K = .289 \times \sqrt{4 \times 40^2 + .5^2}$$

$$K = 23.12$$

$$I = \frac{W}{386} \times K^2$$

$$I = \frac{50}{386} \times 23.12^2$$

$$I = 69 \text{ in-lbs./sec.}^2$$

$$E_K = \frac{I \times \omega^2}{2}$$

$$E_K = \frac{69 \times 2.5^2}{2}$$

$$E_K = 216 \text{ in-lbs.}$$

Assume Model OEM .5 is adequate
 (Page 21).

STEP 3: Calculate work energy

$$F_D = \frac{T}{R_S}$$

$$F_D = \frac{100}{20}$$

$$F_D = 5 \text{ lbs.}$$

$$E_W = F_D \times S = 5 \times .5 = 2.5 \text{ in-lbs.}$$

STEP 4: Calculate total energy per cycle

$$E_T = E_K + E_W = 216 + 2.5 = 218.5 \text{ in-lbs./c}$$

STEP 5: Calculate total energy per hour

$$E_{TC} = E_T \times C = 218.5 \times 250 = 54,625 \text{ in-lbs./hr}$$

STEP 6: Calculate impact velocity and confirm selection

$$V = R_S \times \omega = 20 \times 2.5 = 50 \text{ in./sec.}$$

Model OEM .5 is adequate.

EXAMPLE 11:
Horizontal Table Moving Load,
Rotary Motor Driven with
Additional Load Installed**STEP 1: Application Data**

(W) Weight = 440 lbs.
 (W_1) Installed load = 110 lbs.
 Rotational speed = 10 RPM
 (T) Torque = 2,200 in-lbs.
 Rotary table dia. = 20 in.
 (K_{Load}) Radius of gyration = 8 in.
 (R_S) Mounting radius = 8.86 in.
 (C) Cycles/Hr = 1
 (ω) Direction

Step 2: Calculate kinetic energy

To convert RPM to rad./sec., multiply by .1047

$$\omega = \text{RPM} \times .1047 = 10 \times .1047$$

$$= 1.047 \text{ rad./sec.}$$

$$I = \frac{W}{386} \times K^2$$

In this case, the mass moment of inertia of the table and the mass moment of inertia of the load on the table must be calculated.

$$K_{Table} = \text{Table Radius} \times .707$$

$$K_{Table} = 10 \times .707 = 7.07 \text{ in.}$$

$$I_{Table} = \frac{W}{386} \times K^2_{Table}$$

$$I_{Table} = \frac{440}{386} \times 7.07^2 = 57 \text{ in-lbs./sec.}^2$$

$$I_{Load} = \frac{W_1}{386} \times K^2_{Load}$$

$$I_{Load} = \frac{110}{386} \times 8^2 = 18 \text{ in-lbs./sec.}^2$$

$$E_K = \frac{(I_{Table} + I_{Load}) \times \omega^2}{2}$$

$$E_K = \frac{(57 + 18) \times 1.047^2}{2} = 41 \text{ in-lbs.}$$

Assume Model ECO 50 is adequate
 (Page 46).

STEP 3: Calculate work energy

$$F_D = \frac{T}{R_S} = \frac{2,200}{8.86} = 248 \text{ lbs.}$$

$$E_W = F_D \times S = 248 \times .875 = 217 \text{ in-lbs.}$$

STEP 4: Calculate total energy per cycle

$$E_T = E_K + E_W = 41 + 217 = 258 \text{ in-lbs./c}$$

STEP 5: Calculate total energy per hour: not applicable, C = 1**STEP 6: Calculate impact velocity and confirm selection**

$$V = R_S \times \omega = 8.86 \times 1.047 = 9 \text{ in./sec.}$$

From ECO Sizing Graph.
 Model ECO 50 is adequate.

Shock Absorber Sizing Examples

Typical Shock Absorber Applications

Overview

EXAMPLE 12: Vertical Motor Driven Rotating Arm with Attached Load CASE A-Load Aided by Gravity

STEP 1: Application Data

- (W) Weight = 110 lbs.
- (ω) Angular velocity = 2 rad./sec.
- (T) Torque = 3,100 in-lbs.
- (θ) Starting point of load from true vertical = 20°
- (\emptyset) Angle of rotation at impact = 30°
- (K_{Load}) Radius of gyration = 24 in.
- (R_S) Mounting radius = 16 in.
- (C) Cycles/Hr = 1

STEP 2: Calculate kinetic energy

$$I = \frac{W}{386} \times K^2 = \frac{110}{386} \times 24^2$$

$$I = 164 \text{ in-lbs-sec}^2$$

$$E_K = \frac{I \times \omega^2}{2}$$

$$E_K = \frac{164 \times 2^2}{2}$$

$$E_K = 328 \text{ in-lbs.}$$

Assume Model OEM 1.0 is adequate (Page 21).

CASE A

STEP 3: Calculate work energy

$$F_D = \frac{[T + (W \times K \times \sin(\theta + \emptyset))]}{R_S}$$

$$F_D = \frac{[3,100 + (110 \times 24 \times .77)]}{16}$$

$$F_D = 320.8 \text{ lbs.}$$

$$E_W = F_D \times S = 320.8 \times 1 = 320.8 \text{ in-lbs.}$$

STEP 4: Calculate total energy per cycle

$$E_T = E_K + E_W = 328 + 320.8$$

$$E_T = 648.8 \text{ in-lbs./c}$$

STEP 5: Calculate total energy per hour: not applicable, C = 1

STEP 6: Calculate impact velocity and confirm selection

$$V = R_S \times \omega = 16 \times 2 = 32 \text{ in./sec.}$$

Model LROEM 1.0 is adequate. Needed for higher calculated propelling force.

EXAMPLE 13: Vertical Motor Driven Rotating Arm with Attached Load CASE B-Load Opposing Gravity

STEP 1: Application Data

- (W) Weight = 110 lbs.
- (ω) Angular velocity = 2 rad./sec.
- (T) Torque = 3,100 in-lbs.
- (θ) Starting point of load from true vertical = 30°
- (\emptyset) Angle of rotation at impact = 150°
- (K_{Load}) Radius of gyration = 24 in.
- (R_S) Mounting radius = 16 in.
- (C) Cycles/Hr = 1

STEP 2: Calculate kinetic energy

$$I = \frac{W}{386} \times K^2 = \frac{110}{386} \times 24^2$$

$$I = 164 \text{ in-lbs-sec}^2$$

$$E_K = \frac{I \times \omega^2}{2}$$

$$E_K = \frac{164 \times 2^2}{2}$$

$$E_K = 328 \text{ in-lbs.}$$

Assume Model OEM 1.0 is adequate (Page 21).

CASE B

STEP 3: Calculate work energy

$$F_D = \frac{[T - (W \times K \times \sin(\theta - \emptyset))]}{R_S}$$

$$F_D = \frac{[3,100 - (110 \times 24 \times .77)]}{16}$$

$$E_W = F_D \times S = 67 \times 1 = 67 \text{ in-lbs.}$$

STEP 4: Calculate total energy per cycle

$$E_T = E_K + E_W = 328 + 67$$

$$E_T = 394.7 \text{ in-lbs./c}$$

STEP 5: Calculate total energy per hour: not applicable, C = 1

STEP 6: Calculate impact velocity and confirm selection.

$$V = R_S \times \omega = 16 \times 2 = 32 \text{ in./sec.}$$

Model OEM 1.0 is adequate.

EXAMPLE 14: Vertical Rotating Beam

STEP 1: Application Data

- (W) Weight = 540 lbs.
- (ω) Angular velocity = 3.5 rad./sec.
- (T) Torque = 250 in-lbs.
- (θ) Starting point of load from true vertical = 20°
- (\emptyset) Angle of rotation at impact = 50°
- (R_S) Mounting radius = 20 in.
- (B) Thickness = 2.5 in.
- (L) Length = 24 in.
- (C) Cycles/Hr = 1

STEP 2: Calculate kinetic energy

$$K = .289 \times \sqrt{4 \times L^2 + B^2}$$

$$K = .289 \times \sqrt{4 \times 24^2 + 2.5^2} = 13.89$$

$$I = \frac{W}{386} \times K^2 = \frac{540}{386} \times 13.89$$

$$I = 270 \text{ in-lbs./sec.}^2$$

$$E_K = \frac{I \times \omega^2}{2} = \frac{270 \times 3.5^2}{2} = 1,653 \text{ in-lbs.}$$

Assume Model OEM 1.5M x 2 is adequate (Page 27).

STEP 3: Calculate work energy

$$F_D = \frac{[T + (W \times K \times \sin(\theta + \emptyset))]}{R_S}$$

$$F_D = \frac{250 + (540 \times 13.89 \times \sin(20^\circ + 50^\circ))}{20}$$

$$F_D = 365 \text{ lbs.}$$

$$E_W = F_D \times S = 365 \times 2 = 730 \text{ in-lbs.}$$

STEP 4: Calculate total energy per cycle

$$E_T = E_K + E_W = 1,653 + 730 = 2,383 \text{ in-lbs./c}$$

STEP 5: Calculate total energy per hour: not applicable, C = 1

STEP 6: Calculate impact velocity and confirm selection

$$V = R_S \times \omega = 20 \times 3.5 = 70 \text{ in./sec.}$$

Model OEM 1.5M x 2 is adequate.

Shock Absorber Sizing Examples

Typical Shock Absorber Applications

Overview

EXAMPLE 15: Vertical Rotating Lid

STEP 1: Application Data

- (W) Weight = 2,000 lbs.
- (ω) Angular velocity = 2 rad./sec.
- (Hp) Motor horsepower = .25 Hp
- (θ) Starting point of load from true vertical = 30°
- (ϕ) Angle of rotation at impact = 60°
- (R_S) Mounting radius = 30 in.
- (A) Width = 60 in.
- (B) Thickness = 1 in.
- (C) Cycle/Hr = 1

STEP 2: Calculate kinetic energy

$$K = .289 \times \sqrt{4 \times A^2 + B^2}$$

$$K = .289 \times \sqrt{4 \times 60^2 + 1^2} = 34.68 \text{ in.}$$

$$I = \frac{W}{386} \times K^2 = \frac{2,000}{386} \times 34.68^2 \text{ in.}$$

$$I = 6,232 \text{ in-lbs./sec.}^2$$

$$E_K = \frac{I \times \omega^2}{2} = \frac{6,232 \times 2^2}{2}$$

$$E_K = 12,464 \text{ in-lbs.}$$

Assume Model OEM 3.0M x 2 is adequate (Page 31).

STEP 3: Calculate work energy

$$T = \frac{19,800 \times \text{Hp}}{\omega}$$

$$T = \frac{19,800 \times .25}{2} = 2,475 \text{ in-lbs.}$$

$$F_D = \frac{T + (W \times K \times \sin(\theta + \phi))}{R_S}$$

$$F_D = \frac{2,475 + (2,000 \times 34.68 \times \sin(30^\circ + 60^\circ))}{30}$$

$$F_D = 2,395 \text{ lbs.}$$

$$E_W = F_D \times S = 2,395 \times 2 = 4,790 \text{ in-lbs.}$$

STEP 4: Calculate total energy per cycle

$$E_T = E_K + E_W = 12,464 + 4,790$$

$$= 17,254 \text{ in-lbs./c}$$

STEP 5: Calculate total energy per hour: not applicable, C = 1

STEP 6: Calculate impact velocity and confirm selection

$$V = R_S \times \omega = 30 \times 2 = 60 \text{ in./sec.}$$

Model OEM 3.0M x 2 is adequate.

EXAMPLE 16: Vertical Rotation with Known Inertia Aided by Gravity

STEP 1: Application Data

- (W) Weight = 220.5 lbs
- (I) Known Inertia = 885 in-lbs./sec.²
- (C/G) Center-of-Gravity = 12 in.
- (θ) Starting point from true vertical = 60°
- (ϕ) Angle of rotation at impact = 30°
- (R_S) Mounting radius = 10 in.
- (C) Cycles/Hr = 1

STEP 2: Calculate kinetic energy

$$H = C/G \times [\cos(\theta) - \cos(\theta + \phi)]$$

$$H = 12 \times [\cos(60^\circ) - \cos(30^\circ + 60^\circ)]$$

$$E_K = W \times H$$

$$E_K = 220.5 \times 6$$

$$E_K = 1,323 \text{ in-lbs.}$$

STEP 3: Calculate work energy

$$F_D = (W \times C/G \times \sin(\theta + \phi)) / R_S$$

$$F_D = (220.5 \times 12 \times \sin(60^\circ + 30^\circ)) / 10$$

$$F_D = 264.6 \text{ lbs.}$$

$$E_W = F_D \times S = 264.6 \times 1 = 264.6 \text{ in-lbs.}$$

STEP 4: Calculate total energy per cycle

$$E_T = E_K + E_W = 1,323 + 264.6$$

$$E_T = 1,587.6 \text{ in-lbs/cyc.}$$

STEP 5: Calculate total energy per hour: not applicable, C = 1

$$E_T C = E_T \times C$$

$$E_T C = 1,587.6 \times 1$$

$$E_T C = 1,587.6 \text{ in-lbs/hr.}$$

STEP 6: Calculate impact velocity and confirm selection

$$\omega = ((2 \times E_K) / I) 0.5$$

$$\omega = ((2 \times 1,323) / 885) 0.5 = 1.7$$

$$V = R_S \times \omega = 10 \times 1.7 = 17 \text{ in./sec.}$$

Model OEM 1.15 x 1 is adequate (Page 24).

EXAMPLE 17: Vertical Rotation with Known Inertia Aided by Gravity (w/Torque)

STEP 1: Application Data

- (W) Weight = 220.5 lbs
- (ω) Angular Velocity = 2 rad./sec.
- (T) Torque = 2,750 in-lbs.
- (I) Known Inertia = 885 in-lbs./sec.²
- (C/G) Center-of-Gravity = 12 in.
- (θ) Starting point from true vertical = 60°
- (ϕ) Angle of rotation at impact = 30°
- (R_S) Mounting radius = 10 in.
- (C) Cycles/Hr = 100

STEP 2: Calculate kinetic energy

$$E_K = (I \times \omega^2) / 2$$

$$E_K = (885 \times 2^2) / 2$$

$$E_K = 1,770 \text{ in-lbs.}$$

STEP 3: Calculate work energy

$$F_D = [T - (W \times C/G \times \sin(\theta + \phi))] / R_S$$

$$F_D = [2,750 - (220.5 \times 12 \times \sin(60^\circ + 30^\circ))] / 10$$

$$F_D = 539.6 \text{ lbs.}$$

$$E_W = F_D \times S = 539.6 \times 1 = 539.6 \text{ in-lbs.}$$

STEP 4: Calculate total energy per cycle

$$E_T = E_K + E_W = 1,770 + 539.6$$

$$E_T = 2,309.6 \text{ in-lbs/cyc.}$$

STEP 5: Calculate total energy per hour: not applicable, C = 1

$$E_T C = E_T \times C$$

$$E_T C = 2,309.6 \times 1$$

$$E_T C = 230,960 \text{ in-lbs/hr.}$$

STEP 6: Calculate impact velocity and confirm selection

$$V = R_S \times \omega = 10 \times 2 = 20 \text{ in./sec.}$$

Model OEM 1.15 x 1 is adequate (Page 24).

Shock Absorber Sizing Examples

Typical Shock Absorber Applications

Overview

EXAMPLE 18:
Vertical Rotation with Known Inertia Aided by Gravity (w/Torque)

STEP 1: Application Data

- (W) Weight = 220.5 lbs
- (ω) Angular Velocity = 2 rad./sec.
- (T) Torque = 2,750 in-lbs.
- (I) Known Inertia = 885 in-lbs./sec.²
- (C/G) Center-of-Gravity = 12 in.
- (θ) Starting point from true vertical = 120°
- (\emptyset) Angle of rotation at impact = 30°
- (R_S) Mounting radius = 10 in.
- (C) Cycles/Hr = 100

STEP 2: Calculate kinetic energy

$$E_K = (I \times \omega^2) / 2$$

$$E_K = (885 \times 2^2) / 2$$

$$E_K = 1,770 \text{ in-lbs.}$$

STEP 3: Calculate work energy

$$F_D = [T - (W \times C/G \times \sin(\theta - \emptyset))] / R_S$$

$$F_D = [2,750 - (220.5 \times 12 \times \sin(120^\circ - 30^\circ))] / 10$$

$$F_D = 10.4 \text{ lbs.}$$

$$E_W = F_D \times S = 10.4 \times 1 = 10.4 \text{ in-lbs.}$$

STEP 4: Calculate total energy per cycle

$$E_T = E_K + E_W = 1,770 + 10.4$$

$$E_T = 1,780.4 \text{ in-lbs./cyc.}$$

STEP 5: Calculate total energy per hour: not applicable, C = 1

$$E_{TC} = E_T \times C$$

$$E_{TC} = 1,780.4 \times 100$$

$$E_{TC} = 178,040 \text{ in-lbs./hr.}$$

STEP 6: Calculate impact velocity and confirm selection

$$V = R_S \times \omega = 10 \times 2 = 20 \text{ in./sec.}$$

Model OEMXT 1.5M x 1 is adequate (Page 27).

EXAMPLE 19:
Vertical Rotation Pinned at Center (w/Torque)

STEP 1: Application Data

- (W) Weight = 220.5 lbs.
- (ω) Angular velocity = 2 rad./sec.
- (T) Torque = 2,750 in-lbs.
- (A) Length = 40 in.
- (R_S) Mounting radius = 10 in.
- (B) Thickness = 2 in.
- (C) Cycles/Hr = 100

STEP 2: Calculate kinetic energy

$$K = .289 \times (A^2 + B^2)^{0.5}$$

$$K = .289 \times (40^2 + 2^2)^{0.5} = 11.6 \text{ in.}$$

$$I = (W/386) \times K^2$$

$$I = (220.5/386) \times 11.6^2 = 76.9 \text{ in-lb./sec}^2$$

$$E_K = (I \times \omega^2) / 2$$

$$E_K = (76.9 \times 2^2) / 2$$

$$E_K = 153.8 \text{ in-lbs.}$$

Assume Model OEM 1.0 is adequate (Page 21).

STEP 3: Calculate work energy

$$F_D = T / R_S$$

$$F_D = 2,750 / 10$$

$$F_D = 275 \text{ lbs.}$$

$$E_W = F_D \times S = 275 \times 1 = 275 \text{ in-lbs.}$$

STEP 4: Calculate total energy per cycle

$$E_T = E_K + E_W = 153.8 + 275$$

$$E_T = 428.8 \text{ in-lbs./cycle}$$

STEP 5: Calculate total energy per hour

$$E_{TC} = E_T \times C$$

$$E_{TC} = 428.8 \times 100$$

$$E_{TC} = 42,880 \text{ in-lbs./hr.}$$

STEP 6: Calculate impact velocity and confirm selection

$$V = R_S \times \omega = 10 \times 2 = 20 \text{ in./sec.}$$

Model OEM 1.0 is adequate.

Shock Absorber Sizing Examples

Typical Shock Absorber and Crane Applications

Overview

Calculations assume worst case scenario of 90% trolley weight over one rail.

Crane A		Per Buffer
Propelling Force Crane	lbs.	
Propelling Force Trolley	lbs.	
Weight of Crane (W_a)	lbs.	
Weight of Trolley (W_{ta})	lbs.	
Crane Velocity (V_a)	in./sec.	
Trolley Velocity (V_{ta})	in./sec.	

Crane B		Per Buffer
Propelling Force Crane	lbs.	
Propelling Force Trolley	lbs.	
Weight of Crane (W_b)	lbs.	
Weight of Trolley (W_{tb})	lbs.	
Crane Velocity (V_b)	in./sec.	
Trolley Velocity (V_{tb})	in./sec.	

Crane C		Per Buffer
Propelling Force Crane	lbs.	
Propelling Force Trolley	lbs.	
Weight of Crane (W_c)	lbs.	
Weight of Trolley (W_{tc})	lbs.	
Crane Velocity (V_c)	in./sec.	
Trolley Velocity (V_{tc})	in./sec.	

Please note:

Unless instructed otherwise, ITT Enidine will always calculate with:

- 100% velocity v , and
- 100% propelling force F_D

Plan Views

Application 1

Crane A against Solid Stop

Velocity:

$$V_r = V_a$$

Impact weight per buffer:

$$W_d = \frac{W_a + (1.8) W_{ta}}{\text{Total Number of Shocks}}$$

Application 2

Crane A against Crane B

Velocity:

$$V_r = V_a + V_b$$

Impact weight per buffer:

$$W_1 = W_a + (1.8) W_{ta}$$

$$W_2 = W_b + (1.8) W_{tb}$$

$$W_d = \frac{W_1 W_2}{(W_1 + W_2)(\text{Total Number of Shocks})}$$

Application 3

Crane B against Crane C

Velocity:

$$V_r = \frac{V_b + V_c}{2}$$

Impact weight per buffer:

$$W_1 = W_b + (1.8) W_{tb}$$

$$W_2 = W_c + (1.8) W_{tc}$$

$$W_d = \frac{2 W_1 W_2}{(W_1 + W_2)(\text{Number of Shocks Per Rail})}$$

Application 4

Crane C against Solid Stop with Buffer

Velocity:

$$V_r = \frac{V_c}{2}$$

Impact weight per buffer:

$$W_1 = W_c + 1.8 (W_{tc})$$

$$W_d = \frac{2 W_1}{\text{Number of Shocks Per Rail}}$$

Shock Absorber Sizing Examples

Typical Shock Absorber and Crane Applications

Overview

Please note that this example is not based on any particular standard. The slung load can swing freely, and is therefore not taken into account in the calculation.

Calculation Example for Harbor Cranes as Application 1

Bridge Weight:	837,750 lbs.
Weight of Trolley:	99,200 lbs.
Crane Velocity:	60 in./sec.
Required Stroke:	24 in.
Trolley Velocity:	160 in./sec.
Required Stroke:	40 in.

Given Values

$$W_d = \frac{W_a + (1.8) W_{ta}}{\text{Total Number of Shocks}}$$

$$W_d = \frac{837,750 + (1.8)(99,200)}{2}$$

$W_d = 508,155 \text{ lbs.}$

Determination of the Maximum Impact Weight W_d per Buffer

$$E_K = \frac{W_d}{772} \cdot V_r^2$$

$$E_K = \frac{508,155 \text{ lbs.}}{772} \cdot (60 \text{ in./sec.})^2$$

$E_K = 2,369,635 \text{ in-lbs.}$

Selecting for required 24-inch stroke:
HD 5.0 x 24, maximum shock force ca. 116,159 lbs = $F_s = \frac{E_K}{s \cdot \eta}$

$V_r = V_a$ (Application 1)
 $E_K =$ Kinetic Energy
 $\eta =$ Efficiency

Determine Size of Shock Absorber for Crane

$W_t =$ Trolley Weight per Shock Absorber

$$W_t = \frac{99,200 \text{ lbs.}}{2}$$

$W_t = 49,600 \text{ lbs.}$

$$E_K = \frac{W_t}{772} \cdot V_t^2$$

$$E_K = \frac{49,600 \text{ lbs.}}{772} \cdot (160 \text{ in./sec.})^2$$

$E_K = 1,644,767 \text{ in-lbs.}$

Selecting for required 40-inch stroke:
HDN 4.0 x 40, maximum shock force ca. 48,376 lbs. = $F_s = \frac{E_K}{s \cdot \eta}$

Determine Size of Shock Absorber for Trolley

Shock Absorber Sizing Examples

Typical Shock Absorber and Crane Applications

Overview

Shock Absorber Sizing Examples

Application 1	Value
Buffer Distance H	ft.
Distance X ₁	ft.
Distance Y ₁	ft.
Distance X ₂	ft.
Distance Y ₂	ft.
Total Weight	lbs.
W _{max d}	lbs.
W _{min d}	lbs.
W _{max u}	lbs.
W _{min u}	lbs.

Calculation Example Stacker Cranes

Please note that this example shows how to calculate the maximum impact weight on the upper and lower shock absorbers for a stacker crane.

Distance Between Buffers:	H = 60 ft.	Given Values
Distance to C of G1 - Upper:	X ₁ = 45 ft.	
Distance to C of G1 - Lower:	Y ₁ = 15 ft.	
Distance to C of G2 - Upper:	X ₂ = 21 ft.	
Distance to C of G1 - Lower:	Y ₂ = 39 ft.	
Total Weight:	W = 40,000 lbs.	
$W_{\max d} = \frac{X_1}{H} \cdot W$	$W_{\max d} = \frac{X_2}{H} \cdot W$	Calculation for Lower Shock Absorbers
$W_{\max d} = \frac{15 \text{ m}}{20 \text{ m}} \cdot 20 \text{ t}$	$W_{\max d} = \frac{21 \text{ ft.}}{60 \text{ ft.}} \cdot 40,000 \text{ lbs.}$	
$W_{\max d} = 15 \text{ t}$	$W_{\max d} = 14,000 \text{ lbs.}$	
$W_{\max d} = \frac{Y_1}{H} \cdot W$	$W_{\max d} = \frac{Y_2}{H} \cdot W$	Calculation for Upper Shock Absorbers
$W_{\max d} = \frac{5 \text{ m}}{20 \text{ m}} \cdot 20 \text{ t}$	$W_{\max d} = \frac{39 \text{ ft.}}{60 \text{ ft.}} \cdot 40,000 \text{ lbs.}$	
$W_{\max d} = 5 \text{ t}$	$W_{\max d} = 26,000 \text{ lbs.}$	
Using the value for W _{max} obtained above, the kinetic energy can be calculated, and a shock absorber selected.		Shock Absorber Selection

ITT Enidine Adjustable Hydraulic Series shock absorbers offer the most flexible solutions to energy absorption application requirements when input parameters vary or are not clearly defined.

ITT Enidine's **New ECO OEM Series** adjustable hydraulic shock absorbers are an expansion of our previously released ECO Series product line. These adjustable shock absorbers provide maximum flexibility in a RoHS compliant package. By simply turning an adjustment knob, the damping force can be changed to accommodate a wide range of conditions. ITT Enidine offers the broadest range of adjustable shock absorbers and mounting accessories in the marketplace today.

The ITT Enidine **OEMXT Series** provides a low profile adjustment knob offered in imperial or metric thread configurations with stroke lengths of 1 to 6 inches. For drop-in competitive interchange. **Low Range (LROEMXT) Series** products are also available to control velocities as low as 3 in./sec. and propelling forces as high as 4,000 lbs. OEMXT and OEM Large Series shock absorbers are fully field repairable.

Features and Benefits

- **Adjustable design lets you "fine-tune"** your desired damping and lock the numbered adjustment setting.
- **Internal orifice design** provides deceleration with the most efficient damping characteristics, resulting in the lowest reaction forces in the industry.
- **Threaded cylinders provide mounting flexibility** and increase surface area for improved heat dissipation.
- **Operational parameters can be expanded** through the use of ITT Enidine's Low Range and High Performance products.
- **Custom orificed non-adjustable** units (CBOEM) can be engineered to meet specific application requirements or **emergency impact only requirements.**
- **Special materials and finishes** can be designed to meet specific customer requirements.
 - Optional fluids and seal packages can expand the standard operating temperature range from (15°F to 180°F) to (-30°F to 210°F)
 - Food grade options available
- **ISO quality standards** result in reliable, long-life operation.
- **Fully field repairable units are available** in mid-bore and larger bore product ranges.

Added New Features for the ECO OEM Series

- **Environmentally friendly materials:**
 - ROHS Compliant materials
 - Bio-degradable hydraulic oil
 - Copper-Free design
 - Recyclable packaging materials
- **Introducing our new Enicote II surface finish:**
 - ROHS Compliant
 - Rated at 350 hours salt spray corrosion protection
- **Jam Nut included** with every shock absorber.
- **Wrench flats** promote ease of mounting
- **Capability to mount into pressure chambers**
- **Integrated positive stopping capabilities** up to 100 psi (7 bar).

Adjustable Series

ITT Enidine Adjustable Single Orifice Shock Absorbers

Constant orifice area damping (dashpot) provides the largest shock force at the beginning of the stroke when impact velocity is highest. These shock absorbers provide high-energy absorption in a small, economical design. This type of damping is also available in adjustable shock absorbers.

The damping force of an ITT Enidine single orifice shock absorber can be changed by turning the adjustment knob. Maximum damping force is achieved by turning the adjustment knob to eight (8), while minimum damping force is achieved by turning the adjustment knob to zero (0). Turning the adjustment knob causes the adjustment ball to increase or decrease the clearance (orifice area) between the ball and its seat, depending on rotation direction.

The internal structure of an adjustable single orifice shock absorber is shown above. When force is applied to the piston rod, the check ball is seated and the valve remains closed.

Oil is forced out of the high pressure shock tube chamber through the orifice, creating internal pressure allowing smooth, controlled deceleration of the moving load. When the load is removed, the compressed coil spring moves to reposition the piston head, the check ball unseats, opening the valve that permits rapid piston rod return to the original extended position. The closed cellular foam accumulator compensates for fluid displaced by the piston rod during compression and extension. Without the fluid displacement volume provided by the foam accumulator, the closed system would be hydraulically locked. This type of orifice design produces constant orifice area damping.

ITT Enidine Adjustable Multiple Orifice Shock Absorbers

Conventional damping allows linear deceleration by providing a constant shock force over the entire stroke. This standard design is the most efficient, meaning it allows the most energy to be absorbed in a given stroke, while providing the lowest shock force. This type of damping is also available in adjustable shock absorbers.

The adjustable multiple orifice shock absorber is similar to the principles described earlier. The check ring replaces the check ball and the adjustment feature uses an adjustment pin instead of an adjustment ball. The damping force of the shock absorber can be changed by turning the adjustment knob. Maximum damping force is achieved by turning the adjustment knob to eight (8), while minimum damping force is achieved by turning the adjustment knob to zero (0).

Turning the adjustment knob rotates the adjustment cam within the shock absorber. The cam, in turn, moves the adjustment pin in the shock tube, closing or opening the orifice holes. By closing the orifice holes, the total orifice area of the shock absorber is reduced, thus increasing the damping force of the shock absorber. The adjustable shock absorber enables the user to change the damping force of the unit, should input conditions change, while still maintaining a conventional-type damping curve. Low velocity range (LR) series configurations are available for controlling velocities that fall below the standard adjustable range.

OEM 0.1M → (LR)OEM 1.0 Series

Notes: 1. All shock absorbers will function satisfactorily at 5% of their maximum rated energy per cycle. If less than 5%, a smaller model should be specified.

2. For mounting accessories, see pages 32.

3. Rear flange mounting of OEM 3.0M x 6.5, OEM 4.0M x 8 and OEM 4.0M x 10 models not recommended when mounting horizontally.

Adjustable Series Hydraulic Shock Absorbers

ECO OEM/OEMXT/OEM Large Bore Series

Adjustment Techniques

After properly sizing the shock absorber, the useable range of adjustment settings for the application can be determined:

1. Locate the intersection point of the application's impact velocity and the selected model graph line.
2. The intersection is the **maximum** adjustment setting to be used. Adjustments exceeding this maximum suggested setting could overload the shock absorber.
3. The useable adjustment setting range is from the 0 setting to the **maximum** adjustment setting as determined in step 2.

Example: OEM 1.25 x 1

1. Impact Velocity: 40 in./sec.
2. Intersection Point: Adjustment Setting 5
3. Useable Adjustment: Setting Range 0 to 5

Example: (LR)OEMXT 1 1/8 x 2

1. Impact Velocity: 20 in./sec.
2. Intersection Point: Adjustment Setting 3
3. Useable Adjustment: Setting Range 0 to 3

Useable Adjustment Setting Range

Position 0 provides minimum damping force.
Position 8 provides maximum damping force.

Typical Applications

Adjustable Series

Automotive Manufacturing Applications

Bottling Applications

Automated Applications

ITT Enidine non-adjustable micro-bore hydraulic shock absorbers can accommodate varying energy conditions. This family of tamperproof shock absorbers provides consistent performance, cycle after cycle. Non-adjustable models are designed to absorb maximum energy within a compact envelope size.

The **TK Series** is a versatile, miniature design which provides effective, reliable deceleration and vibration control for light loads. Models can accommodate a wide range of operating conditions.

The ITT Enidine **STH Series** offers the highest energy absorption capacity relative to its size. These custom-orificed shock absorbers are designed to meet exact application requirements. STH Series shock absorbers are available in fully threaded cylinder bodies, providing flexibility in mounting configurations.

Features and Benefits

- Extensive non-adjustable product line offers flexibility in both size and energy absorption capacity to fulfill a wide range of application requirements.
- Tamperproof design ensures repeatable performance.
- Special materials and finishes can be designed to meet specific customer requirements.
- Incorporating optional fluids and seal packages can expand the standard operating temperature range from (15°F to 180°F) to (-30°F to 210°F).
- Threaded cylinders provide mounting flexibility and increase surface area for improved heat dissipation.
- A select variety of surface finishes maintains original quality appearance and provides the longest corrosion resistance protection.
- ISO quality standards result in reliable, long-life operation.

Non-Adjustable Series Hydraulic Shock Absorbers

TK, STH Micro-Bore Series

Overview

ITT Enidine Non-Adjustable Single-Orifice Shock Absorbers

Non-Adjustable Series

Constant orifice area damping (dashpot) provides the largest shock force at the beginning of the stroke when impact velocity is highest. These shock absorbers provide high-energy absorption in a small, economical design.

The internal structure of a single orifice shock absorber is shown above. When a force is applied to the piston rod, the check ball is seated and the valve remains closed. Oil is forced through the orifice, creating internal pressure allowing smooth, controlled deceleration of the moving load. When the load is removed, the compressed coil spring moves to reposition the piston head, the check ball unseats, opening the valve that permits rapid return of the piston head rod to the original extended position.

The closed cellular foam accumulator is compressed by the oil during the stroke, compensating for fluid displaced by the piston rod during compression. Without the fluid displacement volume provided by the foam accumulator, the closed system would be hydraulically locked.

Single-orifice shock absorbers provide constant orifice area (dashpot) damping.

- Notes: 1. Custom orificed application data needed.
 2. All shock absorbers will function at 5% of their rated energy per cycle. If less than 5%, a smaller model should be specified.
 3. Enidine recommends a positive stop to prevent bottoming of the shock absorber.
 4. Δ = Non-standard lead time items, contact ITT Enidine.

Medical Devices

High Speed Automation

ITT Enidine's **New ECO Series** non-adjustable hydraulic shock absorbers can accommodate varying energy conditions. This family of tamperproof shock absorbers provides consistent performance, cycle after cycle. Non-adjustable models are designed to absorb maximum energy within a compact envelope size.

The **ECO Series** was designed using materials and fluids that are safe for our environment. Models can accommodate a wide range of operating conditions with varying masses or propelling forces. The **ECO Series** offers a flexible design to accommodate a wide variety of application parameters. Whether your application has a low velocity/high drive force or high velocity/low drive force condition, the **New ECO Series** will deliver the performance that you have come to expect.

Features and Benefits

- **Extensive non-adjustable product line** offers flexibility in both size and energy absorption capacity to fulfill a wide range of application requirements.
- **Environmentally friendly materials:**
 - RoHS Compliant materials
 - Bio-degradable hydraulic oil
 - Copper-Free design
 - Recyclable packaging materials
- **Introducing our new Enicote II surface finish:**
 - RoHS Compliant
 - Rated at 350 hours salt spray corrosion protection
- **Jam Nut included** with every shock absorber.
- **ISO quality standards** result in reliable, long-life operation.
- **Tamperproof design** ensures repeatable performance.
- **Threaded cylinders provide mounting flexibility** and increase surface area for improved heat dissipation.
- **Wrench flats** promote ease of mounting
- **Capability to mount into pressure chambers**
- **Integrated positive stopping capabilities** up to 100 psi (7 bar).
- **Special materials and finishes** can be designed to meet specific customer requirements
 - Optional fluids and seal packages can expand the standard operating temperature range from (15°F to 180°F) to (-30°F to 210°F)
 - Food grade options available
- **Custom orificed (CBECO)** can be engineered to meet specific application requirements or emergency impact only requirements.

Non-Adjustable Series Hydraulic Shock Absorbers

ECO Series

Overview

ITT Enidine Non-Adjustable Multiple Orifice Shock Absorbers

Self-compensating damping maintains acceptable deceleration with conventional type damping characteristics. Self-compensating shock absorbers operate over a wide range of weights and velocities. These shock absorbers are well suited for high drive force, low velocity applications, and where energy conditions may change. **Curve A** shows the *shock force vs. stroke* curve of a self-compensating shock absorber impacted with a low velocity and high drive force. **Curve B** shows the *shock force vs. stroke* curve of a self-compensating shock absorber impacted with a high velocity and low drive force.

The design of a multi-orifice shock absorber features a double cylinder arrangement with space between the concentric shock tube and cylinder, and a series of orifice holes drilled down the length of the shock tube wall.

During piston movement, the check ring is seated and oil is forced through the orifices in the shock tube wall, into the closed cellular foam accumulator and behind the piston head.

As the piston head moves it closes off orifice holes, thus reducing the available orifice area in proportion to the velocity. After the load is removed the coil spring pushes the piston rod outward. This unseats the check ring and permits the oil to flow from the accumulator and across the piston head, back into the shock tube. This allows quick repositioning for the next impact.

Low Pressure multiple orifice shock absorbers can provide progressive or self-compensating damping, depending on the impact conditions.

Standard

ECO 8 → ECO 100 Series

*Note: A1 and E1 apply to button models and urethane striker cap accessory. One Hex Jam Nut included with every shock absorber.

Non-Adjustable Series Hydraulic Shock Absorbers

ECO 8 → ECO S50 Series

Sizing Curves

Non-Adjustable Series

Note: Minimum impact velocity for ECO models is 4 in./sec. (0,1 m/sec).

ECO 50 → ECO 225 Series

Note: Minimum impact velocity for PRO and ECO models is 4 in./sec. (0,1 m/sec).

Typical Applications

Non-Adjustable Series

Factory Automation

Medical Laboratory Equipment

Food Processing

ITT Enidine's **New PXR Series** non-adjustable hydraulic shock absorbers can accommodate varying energy conditions. This family of tamperproof shock absorbers provides consistent performance, cycle after cycle. Non-adjustable models are designed to absorb maximum energy within a compact envelope size.

The **PXR Series** was designed using materials that are safe for our environment. Models can accommodate a wide range of operating conditions with varying masses or propelling forces. The **PXR Series** offers a flexible design to accommodate a wide variety of application parameters. Whether your application has a low velocity/high drive force or high velocity/low drive force condition, the **New PXR Series** will deliver the performance that you have come to expect.

Features and Benefits

- **Extensive non-adjustable product line** offers flexibility in both size and energy absorption capacity to fulfill a wide range of application requirements.
- **RoHS compliant nickel plated steel body.**
- **Jam Nut included** with every shock absorber.
- **ISO quality standards** result in reliable, long-life operation.
- **Button model supplied** with a larger diameter, more durable button than standard.
- **Tamperproof design** ensures repeatable performance.
- **Threaded cylinders provide mounting flexibility** and increase surface area for improved heat dissipation.
- **Wrench flats** promote ease of mounting
- **Capability to mount into pressure chambers** up to 100 psi (7 bar).
- **Integrated positive stopping capabilities**
- **Special materials and finishes** can be designed to meet specific customer requirements
 - Optional fluids and seal packages can expand the standard operating temperature range from (15°F to 180°F) to (-30°F to 210°F)
 - Food grade options available

Overview

ITT Enidine Non-Adjustable Multiple Orifice Shock Absorbers

Non-Adjustable Series

Self-compensating damping maintains acceptable deceleration with conventional type damping characteristics. Self-compensating shock absorbers operate over a wide range of weights and velocities. These shock absorbers are well suited for high drive force, low velocity applications, and where energy conditions may change. **Curve A** shows the *shock force vs. stroke* curve of a self-compensating shock absorber impacted with a low velocity and high drive force. **Curve B** shows the *shock force vs. stroke* curve of a self-compensating shock absorber impacted with a high velocity and low drive force.

The design of a multi-orifice shock absorber features a double cylinder arrangement with space between the concentric shock tube and cylinder, and a series of orifice holes drilled down the length of the shock tube wall.

During piston movement, the check ring is seated and oil is forced through the orifices in the shock tube wall, into the closed cellular foam accumulator and behind the piston head.

As the piston head moves it closes off orifice holes, thus reducing the available orifice area in proportion to the velocity. After the load is removed the coil spring pushes the piston rod outward. This unseats the check ring and permits the oil to flow from the accumulator and across the piston head, back into the shock tube. This allows quick repositioning for the next impact.

Multiple orifice shock absorbers can provide progressive or self-compensating damping, depending on the impact conditions.

Standard

PXR 25 → PXR 100 Series

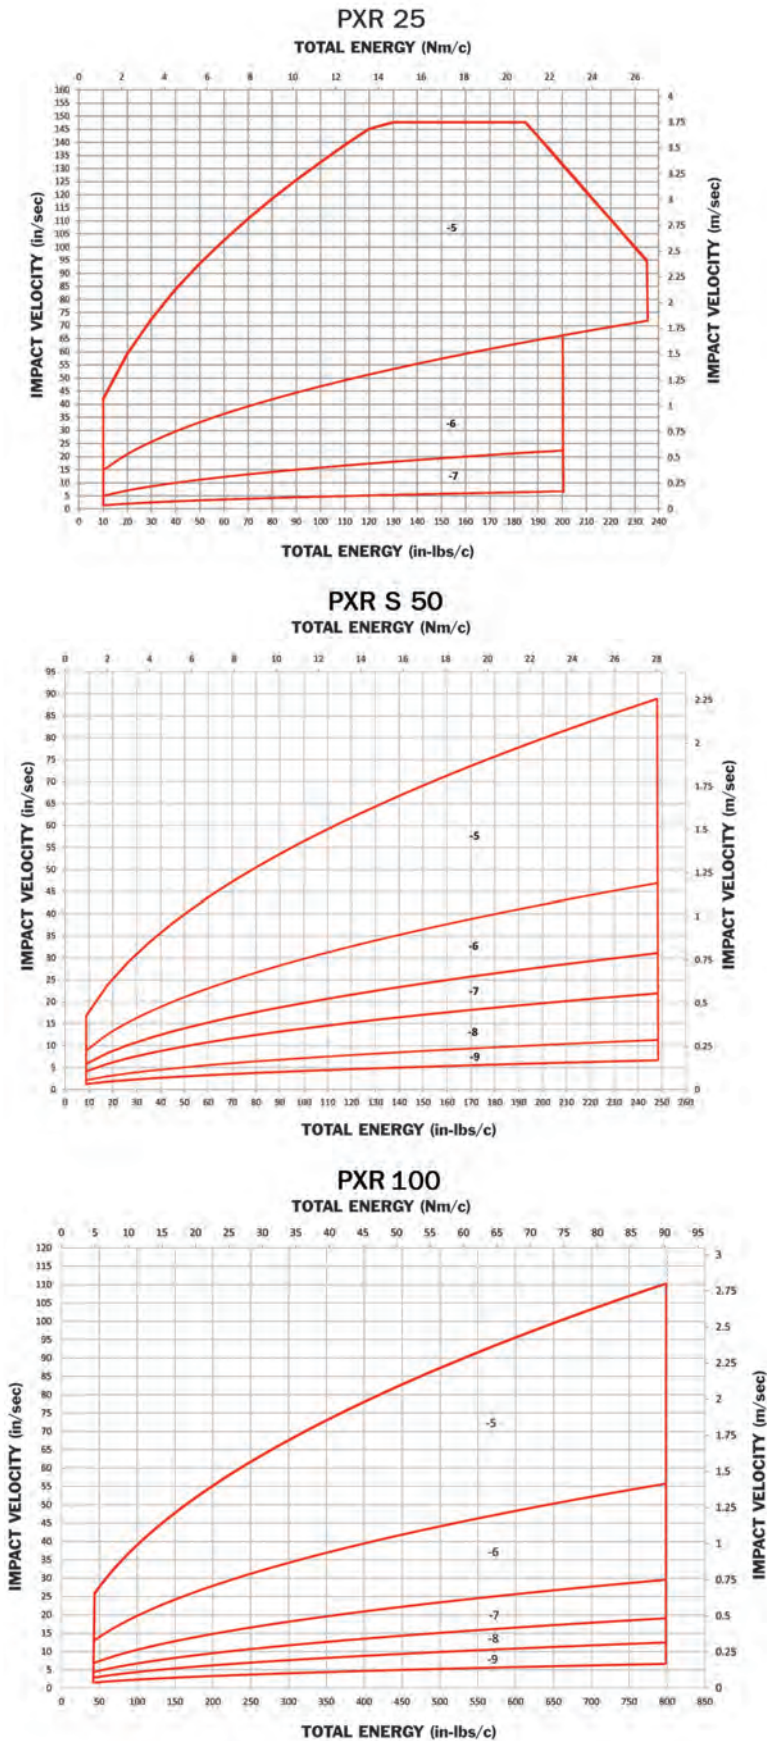

*Note: A1 and E1 apply to button models and urethane striker cap accessory. One Hex Jam Nut included with every shock absorber.

PMXT 1525/2150
Mid-Bore Series

ITT Enidine non-adjustable hydraulic shock absorbers can accommodate varying energy conditions. This family of tamperproof shock absorbers provides consistent performance, cycle after cycle. Non-adjustable models are designed to absorb maximum energy within a compact envelope size.

The **PM Series** uses a self-compensating design to provide energy absorption in low velocity and high drive force applications. The PM Series also includes the added benefit of corrosion-resistant, nickel-plated components and positive stop capabilities. Models can accommodate a wide range of operating conditions with varying masses or propelling forces.

Features and Benefits

- Extensive non-adjustable product line offers flexibility in both size and energy absorption capacity to fulfill a wide range of application requirements.
- Tamperproof design ensures repeatable performance.
- Special materials and finishes can be designed to meet specific customer requirements.
- Incorporating optional fluids and seal packages can expand the standard operating temperature range from (15°F to 180°F) to (-30°F to 210°F).
- Threaded cylinders provide mounting flexibility and increase surface area for improved heat dissipation.
- A select variety of surface finishes maintains original quality appearance and provides the longest corrosion resistance protection.
- ISO quality standards result in reliable, long-life operation.

ITT Enidine Non-Adjustable Multiple Orifice Shock Absorbers

Self-compensating damping maintains acceptable deceleration with conventional type damping characteristics. Self-compensating shock absorbers operate over a wide range of weights and velocities. These shock absorbers are well suited for high drive force, low velocity applications, and where energy conditions may change. **Curve A** shows the *shock force vs. stroke* curve of a self-compensating shock absorber impacted with a low velocity and high drive force. **Curve B** shows the *shock force vs. stroke* curve of a self-compensating shock absorber impacted with a high velocity and low drive force.

The design of a multi-orifice shock absorber features a double cylinder arrangement with space between the concentric shock tube and cylinder, and a series of orifice holes drilled down the length of the shock tube wall.

During piston movement, the check ring is seated and oil is forced through the orifices in the shock tube wall, into the closed cellular foam accumulator and behind the piston head.

As the piston head moves it closes off orifice holes, thus reducing the available orifice area in proportion to the velocity. After the load is removed the coil spring pushes the piston rod outward. This unseats the check ring and permits the oil to flow from the accumulator and across the piston head, back into the shock tube. This allows quick repositioning for the next impact.

Low Pressure multiple orifice shock absorbers can provide progressive or self-compensating damping, depending on the impact conditions.

Typical Applications

Non-Adjustable Series

Automated Handling

Conveyor Systems

Robotics

ITT Enidine Heavy Duty Series large-bore hydraulic shock absorbers protect equipment from large impacts in applications such as automated storage and retrieval systems, as well as overhead bridge and trolley cranes. They are available in a wide variety of stroke lengths and damping characteristics to increase equipment life and meet stringent deceleration requirements.

HDN Series

Custom-orificed design accommodates specified damping requirements. Computer generated output performance simulation is used to optimize the orifice configuration. Available in standard bore dimensions of up to 4 in. (100mm) and strokes over 60 in. (1524mm).

HDA Series

Adjustable units enable the user to modify shock absorber resistance to accommodate load velocity variations, with strokes up to 12in. (305mm). Standard adjustable configurations available.

**Features and Benefits HDN, HDA**

- Designed with Environmentally friendly materials and fluids
- Compact design smoothly and safely decelerates large energy capacity loads up to 3,000,000 in-lbs. per cycle (330 000 Nm)
- Internal charged air/oil accumulator replaces mechanical return springs, providing shorter overall length and reduced weight.
Optional Bladder Accumulator (BA) for higher cycle rates also available.
- Engineered to meet OSHA, AISE, CMAA and other safety specifications such as DIN and FEM.
- Wide variety of optional configurations including bellows, clevis mounts and safety cables.
- Zinc plated external components provide excellent corrosion protection.
- Epoxy painting and special rod materials are available for use in highly corrosive environments.
- All sizes are fully field repairable.
- Piston rod extension sensor systems available for re-use safety requirements.
- Incorporating optional fluids and seal packages can expand standard operating temperature range from 15°F to 140°F (-10°C to 60°C) to -30°F to 210°F (-35°C to 100°C)

Heavy Duty Shock Absorbers

HDN 1.5 Series

Technical Data

HDN 1.5 x 2 → HDN 1.5 x 32 Series

Dimensions are in inches (millimeters).

** HDN w/o BA option contains only a single charge/fill port.

* Denotes Shock Absorber Bladder Accumulator Option.

Note: For TF, FF and FR mounting, delete front foot and dimensions.

Notes: 1. HDN shock absorbers will function satisfactorily at 5% of their maximum rated energy per cycle. If less than these values, a smaller model should be specified.

2. It is recommended that the customer consult ITT Enidine for safety-related overhead crane applications.

3. The energy data listed is for ideal linear impacts only. If side load conditions exist in the application, contact ITT Enidine for sizing assistance.

4. Rear flange mounting of 12 inch (300 mm) strokes and longer not recommended. Front and rear flange or foot mount configurations are recommended.

5. Maximum cycle rate is 60 cycles/hr. for HDN with BA (Bladder Accumulator) option and 30 cycles/hr. without BA option.

6. For impact velocities over 180 in./sec. (4.5 m/s), consult factory.

Notes: 1. HDN shock absorbers will function satisfactorily at 5% of their maximum rated energy per cycle. If less than these values, a smaller model should be specified.
 2. It is recommended that the customer consult ITT Enidine for safety-related overhead crane applications.
 3. The energy data listed is for ideal linear impacts only. If side load conditions exist in the application, contact ITT Enidine for sizing assistance.
 4. Rear flange mounting of 12 inch (300 mm) strokes and longer not recommended. Front and rear flange or foot mount configurations are recommended.
 5. Maximum cycle rate is 60 cycles/hr. for HDN with BA option and 30 cycles/hr. without BA (Bladder Accumulator) option.
 6. For impact velocities over 180 in./sec. (4.5 m/s), consult factory.
 7. ** HDN 3.0 x 56 and HDN 3.0 x 60 have 2 charge ports.

Heavy Duty Series Shock Absorber

HDN 3.5 Series

Technical Data

HDN 3.5 x 2 → HDN 3.5 x 56 Series

Dimensions are in inches (millimeters).

** HDN w/o BA option contains only a single charge/fill port.
* Denotes Shock Absorber Bladder Accumulator Option.
Note: For TF, FF and FR mounting, delete front foot and dimensions.

- Notes: 1. HDN shock absorbers will function satisfactorily at 5% of their maximum rated energy per cycle. If less than these values, a smaller model should be specified.
 2. It is recommended that the customer consult ITT Enidine for safety-related overhead crane applications.
 3. The energy data listed is for ideal linear impacts only. If side load conditions exist in the application, contact ITT Enidine for sizing assistance.
 4. Rear flange mounting of 12 inch (300 mm) strokes and longer not recommended. Front and rear flange or foot mount configurations are recommended.
 5. Maximum cycle rate is 60 cycles/hr. for HDN with BA option and 30 cycles/hr. without BA option.
 6. For impact velocities over 180 in./sec. (4.5 m/s), consult factory.

- Notes:
- HDA shock absorbers will function satisfactorily at 5% of their maximum rated energy per cycle. If less than these values, a smaller model should be specified.
 - It is recommended that the customer consult ITT Enidine for safety-related overhead crane applications.
 - The energy data listed is for ideal linear impacts only. If side load conditions exist in the application, contact ITT Enidine for sizing assistance.
 - Rear flange mounting of 12 inch (300 mm) strokes and longer not recommended. Front and rear flange or foot mount configurations are recommended.
 - Maximum cycle rate is 60 cycles/hr.
 - HDA models which have an impact velocity below 30 in./sec. (.8 m/sec.), please contact ITT Enidine for assistance.
 - Maximum allowable applied propelling force: 25,000 lbs. (111 200 N)

Adjustment Techniques

Useable Adjustment Setting Range

After properly sizing an HDA shock absorber, the useable range of adjustment settings can be determined:

- Locate the intersection point of the application's impact velocity and the HDA model graph line.
- The intersection is the maximum adjustment setting to be used. Adjustments exceeding this setting could overload the shock absorber.
- The useable adjustment setting range is from setting 1 to the MAXIMUM adjustment setting as determined in step 2.

EXAMPLE: HDA Series

- Impact Velocity: 80 in./sec. (2 m/s)
- Intersection Point: Adjustment Setting 3
- Useable Adjustment Setting Range: 1 to 3

 7. Maximum allowable applied propelling force: 40,000 (177 900 N)

HD Series

Custom-orificed design accommodates specified damping requirements. Computer generated output performance simulation is used to optimize the orifice configuration. Available in standard bore dimensions of up to 5 in. (125mm) and 6 in. (156mm) with strokes over 60 in. (1525mm).

**Features and Benefits HD**

- Compact design smoothly and safely decelerates large energy capacity loads up to 8,000,000 in.-lbs. per cycle (900 000 Nm)
- Engineered to meet OSHA, AISE, CMAA and other safety specifications such as DIN and FEM.
- Internal air charged bladder accumulator replaces mechanical return springs, providing shorter overall length and reduced weight.
- Wide variety of optional configurations including bellows, clevis mounts and safety cables.
- Available in standard adjustable or custom-orificed non-adjustable models.
- Zinc plated external components provide enhanced corrosion protection.
- Epoxy painting and special rod materials are available for use in highly corrosive environments.
- All sizes are fully field repairable.
- Piston rod extension sensor systems available for reuse safety requirements.
- Incorporating optional fluids and seal packages can expand standard operating temperature range from 15°F to 140°F to -30°F to 210°F (-10°C to 60°C) to (-35°C to 100°C)

Notes: 1. HD shock absorbers will function satisfactorily at 5% of their maximum rated energy per cycle.

HDA models will function satisfactorily at 10% of their maximum rated energy per cycle. If less than these values, a smaller model should be specified.

2. It is recommended that the customer consult ITT Enidine for safety-related overhead crane applications.

3. The energy data listed is for ideal linear impacts only. If side load conditions exist in the application, contact ITT Enidine for sizing assistance.

4. Rear flange mounting of 12 inch (300 mm) strokes and longer not recommended. Front and rear flange or foot mount configurations are recommended.

5. HDA models which have an impact velocity below 30 in./sec (.8 m/sec), please contact ITT Enidine for sizing assistance.

6. Maximum cycle rate is 60 cycles/hr.

7. For impact velocities over 180 in./sec. (4.5 m/s), consult factory.

Heavy Duty Series Shock Absorber

Mounting and Accessories for HDN, HD, HDA Series

Mounting and Accessories

Typical mounting methods are shown below. Special mounting requirements can be accommodated upon request.

TM: Rear Flange Front Foot Mount

FM: Front and Rear Foot Mount
Also shown is optional safety cable, typically used in overhead applications.

TF: Front and Rear Flanges

FF: Front Flange

CM: Clevis Mount

FR: Rear Flange

Note: Rear flange mounting not recommended for stroke lengths above 12 inches. (300 mm)

HD(A) 3.0 x 2 → HD(A) 4.0 x 10 Series

Clevis Mounts (CM)

Dimensions are in inches (millimeters).

Note: Piston clevis dimensions are typical both ends on HD(A) 4.0 models.

Optional Piston Rod Return Sensor

- Magnetic proximity sensor indicates complete piston rod return with 10-foot (3 m) long cable.
- If complete piston rod does not return the circuit remains open. This can be used to trigger a system shut-off.
- Contact ITT Enidine for other available sensor types.
- Sensor port in line with charge port on models HDN 1.5, 2.0 and 4.0. Location offset 90° for models HDN 3.0 and 3.5.

Sensor Specifications

- Voltage 10 - 30V
- Load Current ≤ 200 mA
- Leakage Current ≤ 80 mA
- Load Capacitance ≤ 1.0 mF
- Ambient Temperature: -15° to 160°F (-26° to 71°C)

HDN 1.5, 2.0 and 4.0

Model	Sensor in. (mm)	Height in. (mm)
HDN 1.5	3.4 (86)	0.79 (20)

HI Series

ITT Enidine's **Heavy Industry (HI) Series** buffers safely protect heavy machinery and equipment during the transfer of materials and movement of products. The large-bore, high-capacity buffers are individually designed to decelerate moving loads under various conditions and in compliance with industry mandated safety standards. Control of bridge cranes, trolley platforms, large container transfer and transportation safety stops are typical installation examples. Industry-proven design technologies, coupled with the experience of a globally installed product base, ensure deliverable performance that exceeds customer expectations.

Prior to HI Series buffer manufacture, computer-simulated response curves are generated to model actual conditions, verify product performance, confirm damping characteristics and generate unique custom-orificed designs that accommodate multi-condition or specific damping requirements.

Characteristics of the HI Series include a nitrogen-charged return system that allows for soft deceleration and positive return in a maintenance-free package. The oversize bore area results in optimal energy absorption capabilities and increased internal safety factors. State-of-the-art testing facilities ensure integrity of design and product performance.

Features and Benefits

- Compact design smoothly and safely decelerates large energy capacity loads up to 4 million in-lbs. per cycle with standard stroke lengths.
- Engineered to meet OSHA, AISE, CMMA and other safety specifications such as DIN and FEM.
- Nitrogen-charged return system allows for soft deceleration and positive return in a maintenance-free package.
- Wide variety of optional configurations including protective bellows and safety cables.
- Available in custom-orificed non-adjustable models.
- Special epoxy painting and rod materials are available for use in highly corrosive environments.
- Surface treatment (Sea water resistant)
Housing: gray color, three-part epoxy
Piston Rod: hard-chrome plated steel
- Incorporating optional fluids and seal packages available to expand standard operating temperature range from (0°F to 175°F) to (-30°F to 250°F) (-10°C to 60°C) to (-35°C to 100°C)

ITT Enidine Heavy Industry (HI) Series Buffers

ITT Enidine's Heavy Industry Series (HI) buffers safely protect heavy machinery and equipment during the transfer of materials and movement of products. The large-bore, high-capacity buffers are individually designed to decelerate moving loads under various conditions and in compliance with industry mandated safety standards. Control of bridge cranes, trolley platforms, large container transfer and transportation safety stops are typical installation examples. Industry-proven design technologies, coupled with the experience of a globally installed product base, ensure deliverable performance that exceeds customer expectations.

Prior to HI Series buffer manufacture, computer-simulated response curves are generated to model actual conditions, verify product performance, confirm damping characteristics and generate unique custom-orificed designs that accommodate multi-condition or specific damping requirements.

Characteristics of the HI Series include a nitrogen-charged return system that allows for soft deceleration and positive return in a maintenance-free package. The oversize bore area results in optimal energy absorption capabilities and increased internal safety factors. State-of-the-art testing facilities ensure integrity of design and product performance.

The design of Jarret Series Industrial Shock Absorber utilizes the unique compression and shear characteristics of specially formulated silicone elastomers.

These characteristics allow the energy absorption and return spring functions to be combined into a single unit **without the need for an additional gas or mechanical spring stroke return mechanism.**

Applications

Shock protection for all types of industries including:
**Defense, Automotive, Railroad, Materials Handling,
 Marine, Pulp/Paper, Metal Production and Processing.**

Advantages:

- Simple design
- High reliability
- High damping coefficient
- Low sensitivity to temperature variances

Visco-elastic technology makes use of the fundamental properties of specially formulated Jarret visco-elastic medium.

Compressibility:

Preloaded spring function
 $F = F_0 + Kx$

Viscosity:

Shock absorber function
 $F = F_0 + Kx + CV^\alpha$ with α between 0,1 and 0,4

The two functions can be used separately or in combination, in the same product:

**Preloaded Spring:
Spring Function Only**

- Hysteresis of between 5% and 10%
- Reduced weight and space requirement
- Force/stroke characteristic is independent of actuation speed

**Shock Absorber Without Spring Return:
Shock Absorbing Function Only**

- Dampening devices
- Blocking devices

**Preloaded Spring Shock Absorbers:
Combine Spring and Shock Absorber Functions**

- Dissipate between 30% and 100% of energy
- Force/stroke characteristics remain relatively unchanged between 15°F and 160°F (-10°C and + 70°C)

* Spring and shock absorber products are capable of functioning between 15°F and 160°F (-10°C and + 70°C). However, standard products are not intended for use over the full rated temperature range. Consult factory for special product considerations required to accommodate operation over a wide temperature range.

Jarret Shock Absorbers

BC1N Series

Sizing Example

BC1ZN → BC1GN Series

1 - Selection Chart

Based On

- Impact velocity (V) : 2 m/s
- Operating temperature : 20° to + 40°C
- Surface protection : Electrolytic zinc
- Dynamic performance diagram

Force kN

Symbols:

- En = Energy Capacity (kJ)
- C = Maximum Stroke (mm)
- Rdy = Dynamic Reaction Force (kN)

2 - Energy Calculation

$$E = \frac{1}{2} M_e V_e^2$$

3 - Allowable Impact Velocity

$$IF < 20 \times \frac{E_n}{E} \text{ Impacts/hour}$$

4 - Effective (Actual) Stroke Calculation

$$C_e = C \left(\sqrt{\frac{E}{E_n (0,03 V + 0,24) + 1,36 - 1,17}} \right)$$

5 - Calculation of Effective Reaction Force Rdy_e

$$Rdy_e = \left[\left(\frac{Rdy_{max} - Rdy_0}{C} \right) \times C_e + Rdy_0 \right] (0,1V + 0,8)$$

6 - Application Example

Given data: Effective mass = 15 t
 Effective velocity = 0,8 m/s
 Impact frequency: 25 impacts/hour

1. Energy dissipated per impact: $E = \frac{1}{2} (15)(0,8) = 4,8 \text{ kJ}$

2. BC1FN Selected

3. Allowable impact frequency $IF < 20 \times 7 / 4.8 = 29$
 $25 < 29$

4. Effective (Actual) Stroke:

$$C_e = 60 \left(\sqrt{\frac{4,8}{7 (0,03 \times 0,8 + 0,24) + 1,36 - 1,17}} \right)$$

$C_e = 49 \text{ mm}$

5. Effective Reaction Force:

$$Rdy_e = \left[\frac{(150 - 90) \times 49 + 90}{60} \right] (0,1 \times 0,8 + 0,8)$$

$Rdy_e = 122 \text{ kN}$

6. Compare standards to results:

	BC1FN		APPLICATION
E (kJ) =	7	>	4,8
C (mm) =	60	>	49
Rdymax (kN)	150	>	122

All performance characteristics can be modified. Please advise us of your specific requirements.

Impact Speed: BC5 Series shock absorbers are designed for impact velocities of up to 4 m/sec. Higher impact velocities require custom modification.
Spring and shock absorber products are capable of functioning between 15°F and 160°F (-10°C and + 70°C). However, standard products are not intended for use over the full rated temperature range. Consult factory for special product considerations required to accommodate operation over a wide temperature range.

Jarret Shock Absorbers

BC5 Series

BC5A → BC5E Series

Sizing Example

Based On

- Impact velocity (V) : 2 m/s
- Operating temperature : 20° to + 40°C
- Surface protection : Electrolytic zinc
- Dynamic performance diagram

Force kN

Symbols:

- En = Energy Capacity (kJ)
- C = Maximum Stroke (mm)
- Rdy = Dynamic Reaction Force (kN)

1 - Energy Calculation

$$E = \frac{1}{2} M_e V_e^2$$

2 - Allowable Impact Frequency (IF)

$$IF < 15 \times \frac{E_n}{E} \text{ Impacts/hour}$$

3 - Effective Stroke Calculation

$$C_e = C \left(\sqrt{\frac{E}{E_n (0,03 V + 0,24)}} + 1,36 - 1,17 \right)$$

4 - Calculation of Effective Reaction Rdy_e

$$Rdy_e = \left[\left(\frac{Rdy_{max} - Rdy_0}{C} \right) \times C_e + Rdy_0 \right] (0,1V + 0,8)$$

5 - Application Example

Data: Two shock absorbers in series, Effective mass m=300 t, Impact speed v = 1,2 m/s (which is an impact of 0,6 m/s on each shock absorber), Impact frequency = 15 impacts/hour, Maximum allowable structural load 1000 kN

$$1: E = \frac{1}{2} \left(\frac{1}{2} mV^2 \right)$$

$$E = \frac{1}{2} \left(\frac{1}{2} 300 \times 1,2^2 \right) = 108 \text{ kJ}$$

2. Selection BC5E-180

3. Maximum allowable impact frequency is $15 \times \frac{150}{108}$ 21 impacts/hour. Therefore 15 impacts/hour is acceptable.

$$15 < 15 \times \frac{150}{108}$$

$$15 < 21$$

4. Effective (actual) stroke is 167 mm

$$C_e = 180 \times \left(\sqrt{\frac{108}{150 (0,03 \times 0,6 + 0,24)}} + 1,36 - 1,17 \right) = 156 \text{ mm}$$

$$5. Rdy_e = \left[(1\ 100 - 640) \times \frac{156}{180} + 640 \right] (0,1 \times 0,6 + 0,8)$$

$$Rdy_e = 893 \text{ kN} < 1000 \text{ kN}$$

6. Compare standards to results:

	BC5E-180	APPLICATION
E (kJ) =	150	> 108
IF =	21	> 15
C (mm) =	180	> 156
Rdy _{max} (kN)	1100	> 893

Note: maximum allowed structural load is 1 000 kN > 893 kN

**All performance characteristics can be modified.
Please advise us of your specific requirements.**

Rear Flange Mounting - Fa on Request.

Spring and shock absorber products are capable of functioning between 15°F and 160°F (-10°C and + 70°C). However, standard products are not intended for use over the full rated temperature range. Consult factory for special product considerations required to accommodate operation over a wide temperature range.

Jarret Shock Absorbers

XLR Series

Sizing Example

XLR6-150 → XLR-800 Series

Based On

- Impact velocity (V) : 2 m/s
- Operating temperature : 20° to + 40°C
- Surface protection : Electrolytic zinc & Painting
- Dynamic performance diagram

Symbols:

- En = Energy Capacity (kJ)
- C = Maximum Stroke (mm)
- Rdy = Dynamic Reaction Force (kN)

1 - Energy Calculation

$$E = \frac{1}{2} M_e V_e^2$$

2 - Allowable Impact Frequency (IF)

$$IF < 8 \times \frac{E_n}{E} \text{ Impacts/hour}$$

3 - Required Stroke Calculation

$$C_e = C \left(\sqrt{\frac{E}{E_n (0,027 V + 0,22)}} + 1,83 - 1,35 \right)$$

4 - Calculation of Effective Reaction Rdy_e

$$Rdy_e = \left[\left(\frac{Rdy_{max} - Rdy_0}{C} \right) \times C_e + Rdy_0 \right] (0,1V + 0,8)$$

5 - Application Example Data:

- Effective mass = 30 t
- Effective impact speed = 2,2
- Maximum allowable structural force = 350 kN
- Impact frequency = 10/hr

1: Energy dissipated/impact is 72,6 kJ

$$E = \frac{1}{2} \times 15 \times (2,2)^2$$

$$E = 72,6 \text{ kJ}$$

2: XLR100-400 selected

3: Maximum allowable impact frequency

$$IF < 8 \times 100 / 72,6 = 11$$

(10 < 11 impacts/hour is acceptable)

4: Effective (actual) stroke:

$$C_e = 400 \times \left(\sqrt{\frac{72,6}{100 (0,027 \times 2,7 + 0,22)}} + 1,83 - 1,35 \right)$$

$$C_e = 290,3 \text{ mm}$$

$$5: Rdy_e = \left[\left(\frac{320 - 175}{400} \right) 290,3 + 175 \right] (0,1 \times 2,2 + 0,8)$$

$$Rdy_e = 285,8 \text{ kN}$$

(which is less than maximum allowable reaction force of 350 kN)

6. Compare standards to results:

	XLR100-400	APPLICATION
E (kJ) =	100	> 72,6
IF =	11	> 10
C (mm) =	400	> 301,8
Rdy _{max} (kN)	320	> 290,1

Note: maximum allowed structural load is 350 kN > 290,1 kN

**All performance characteristics can be modified.
Please advise us of your specific requirements.**

ITT Enidine Rate Controls are designed to regulate the speed and time required for a mechanism to move from one position to another. Adjustable and non-adjustable models are available to accommodate a wide variety of motion control applications. Both single and double acting hydraulic damper designs allow smooth, controllable machine operation by providing rate control for both linear and rotational (hinged) loads. Each product family offers a variety of stroke lengths from which to choose.

Adjustable, Double Acting (ADA 500 and ADA 700 Series) rate controls regulate speed in both tension and/or compression modes independently. ADA products let the user adjust the rate to suit specific application requirements. Fixed orifice interchangeable cartridges are available for the ADA 500 Series, which provide tamperproof operation once the desired rate has been determined. An optional remote adjustment cable provides adjustment control in otherwise inaccessible locations for the ADA 500 Series.

The **DA Series** are non-adjustable, custom-orificed at factory, double acting rate controls which provide smooth, reliable motion control for high load capacities. Tow Bar (TB) snubbers are specially designed DA's which dampen the abrupt starts and stops of power and free conveying systems.

Features and Benefits

- Extensive product line offers flexibility in both size and load capacities to fulfill a wide range of application requirements.
- Custom stroke lengths and damping characteristics can be designed to suit your application requirements.
- ISO quality standards result in reliable, long-life operation.
- Incorporating optional fluids can expand the standard operational temperature range from (15°F to 180°F) to (-30°F to 210°F).
- A select variety of surface finishes maintains original quality appearance and provides the longest corrosion resistance protection.
- Special materials and finishes available to meet specific customer requirements.

ITT Enidine Double Acting Adjustable (ADA) rate controls control the velocity of both linear and rotational loads throughout their entire motion. Adjustment cartridges on the ADA 500 Series allow flexibility in controlling the speed for an applied force in both the tension and compression directions. Maximum damping is achieved by turning the adjustment knob to the number eight (8) setting, while turning the knob to the zero (0) setting provides minimal resistance. Interchangeable, threaded, fixed-orifice cartridges can provide consistent, tamper-resistant damping to meet particular application requirements.

Resistance is controlled by using a wrench key at either end of the rate control and adjusting the movement by following the stiffer (+) or softer (-) indications. When the rate control is compressed, the oil is orificed through the compression adjustment cartridge and flows freely through the tension adjustment cartridge. The tension cartridge check ball unseats and allows free flow of the oil to the rod end of the shock tube. A foam accumulator is utilized to accept the volume of oil displaced by the piston rod. When the rate control is extended, oil is moved through an internal flow path in the shock tube and is orificed through the tension adjustment cartridge. The compression cartridge check ball unseats and allows free flow of the oil into the blind end of the shock tube.

The ADA 500 Series utilizes two independent adjustment cartridges for motion control in each direction, housed in the cylinder end. The ADA 700 Series has independently controlled tension and compression capabilities located at each end of the unit.

DA Series rate controls are ideally suited for high-energy, heavy load applications requiring rate control in tension, compression or both directions. These non-adjustable, custom-orificed units are designed to specific input conditions, and allow for single and multiple orifice configurations.

passed through the orifice hole(s), a portion of the oil passes through the extension check valve and fills the rod end of the shock tube. The remainder of the oil volume displaced by the piston rod compresses the foam accumulator.

Upon compression of the rate control, the compression check ball seats. As the piston head moves, oil is forced through the orifice hole(s) located in the shock tube, producing the required damping force. After the oil has

Upon extension of the rate control, the extension check ball seats. As the piston head moves, oil is forced through the orifice hole(s) located in the shock tube producing the required damping force. The compression check ball is unseated by the flow of oil which fills the blind end of the shock tube.

ITT Enidine Rate Controls are used to regulate the speed or time required for a mechanism to move from one position to another. They use proven technology to enhance performance in a variety of product applications. Rate controls are typically used to control pneumatic cylinders, linear slides, lids, and other moving mechanisms.

The advantages of using rate controls include:

- 1. Longer Machine Life** – The use of rate controls significantly reduces shock and vibration to machinery caused by uncontrolled machine operation. This further reduces machinery damage, downtime and maintenance costs, while increasing machine life.
- 2. Improved Production Quality** – Harmful effects of uncontrolled motion, such as noise, vibration and damaging impacts, are moderated or eliminated so that production quality is improved.
- 3. Safer Machinery Operation** – Rate controls protect machinery and equipment operators by offering predictable, reliable and controlled machine operation.
- 4. Competitive Advantage** – Machines and end products become more valuable because of increased productivity, longer life, lower maintenance and safer operation.

ITT Enidine offers a wide range of rate controls that provide motion control in tension, compression, or both directions. Adjustable and non-adjustable tamperproof models are available to fit your particular application requirements.

The resisting force provided by ITT Enidine rate controls is typically constant over the entire stroke when the piston rod is moved at a constant velocity, since the rate controls are single orifice products. DA Series models can be custom orificed to provide increasing resisting force over the stroke through the use of multiple orifices in the shock tube. This can be beneficial when controlling the velocity of a lid as it closes, since the torque from the weight of the lid changes as it closes.

Rate Control Adjustment Techniques

A properly adjusted rate control safely controls machinery operation, and reduces noise levels from uncontrolled motion. To correctly adjust the rate control after it has been properly sized for the application, set the adjustment knob (per the useable adjustment setting graphs for the applicable model). Cycle the mechanism and observe the motion of the system.

If the motion of the mechanism is too fast, move the adjustment dial to the next largest number until the desired velocity is achieved.

If the motion of the mechanism is too slow, move the adjustment dial to the next smallest number until the desired velocity is achieved.

Typical Application: Print Rollers and Paper Tensioners

Useable Adjustment Setting Range

Green lines are model's maximum allowable propelling force.

ADA 500

Compression Mode Adjustment Setting Curve

Tension Mode Adjustment Setting Curve

Damping Force

Position 0 provides minimum damping force. Position 8 provides maximum damping force. 180° adjustment with setscrew locking.

- Determine the damping direction (tension [T], compression [C] or both [T and C]), stroke (in. or mm) required, propelling force (lbs. or N), desired velocity (in./sec. or m/s) and cycles per hour.
 - Calculate total energy per hour (in-lbs./hr or Nm/hr).
 - Compare the damping direction (T, C, or T and C), stroke (in. or mm) required, propelling force (lbs. or N) and total energy per hour (in-lbs./hr or Nm/hr) to the values listed in the Rate Controls Engineering Data charts.
- NOTE:** Propelling force and velocity should be measured at the location of the rate control.
- Determine if adjustable or non-adjustable model is desired.
 - Select the appropriate rate control model.
 - For adjustable rate control models, refer to the Useable Adjustment Settings section for the selected model to determine the proper adjustment setting.
 - For non-adjustable rate control models, refer to the Damping Constant Selection Instructions for the selected model to determine the proper damping constant.

Example:

- Damping Direction (T,C or T and C): T and C
 Stroke (S): 4 in. (102 mm)
 Propelling Force (F_D): 200 lbs. (890 N) (T and C)
 Velocity (V): 8 in./sec. (0.2 m/s)
 Cycles/Hour (C): 20
- Total Energy/Hour: 16,000 in-lbs./hr (1 808 Nm/hr) compression
 16,000 in-lbs./hr (1 808 Nm/hr) tension

 32,000 in-lbs./hr (3 616 Nm/hr) Total
- Compare damping direction (T and C), stroke, propelling force and total energy per hour, to the values listed in the rate controls engineering data charts.
- An adjustable model is desired.
- Selection: ADA 510 (T and C), The proper adjustment is two (2) in tension and compression per the ADA 500 Series Useable Adjustment Setting Range Curves.

After properly sizing the ADA, the adjustment setting can be determined.

- To determine the approximate adjustment setting when the selected model, propelling force, and velocity are known: compare velocity to the propelling force in the compression and/or tension mode adjustment setting curves. The intersection point of the velocity and the propelling force is the approximate adjustment setting to be used. Adjustment higher or lower than this setting will result in slower or faster damper operation, respectively.
- To determine the velocity when the selected model, adjustment setting, and propelling force are known: compare the propelling force to the adjustment setting in the compression and/or tension mode adjustment setting curves. The intersection point of the propelling force and the adjustment setting is the approximate velocity for the selected model. Higher velocities are obtained at lower adjustment settings and lower velocities are obtained at higher adjustment settings.

EXAMPLE: Double Acting Application

- Stroke required: 2 in. (51 mm)
 Control direction: Tension and Compression
 Propelling force: 350 lbs. (1 557 N) (tension),
 400 lbs. (1 780 N) (compression)
- Selection: ADA 505
- Velocity: 11 in./sec. (.28 m/s) (tension),
 6 in./sec. (.15 m/s) (compression)
 Intersection point: Adjustment setting 2 (tension),
 4 (compression)
 - Adjustment setting: 2 (tension), 4 (compression)
 Velocity: 11 in./sec. (.28 m/s) (tension),
 6 in./sec. (.15 m/s) (compression)

NOTE: When a free flow plug is used, the intersection point of the propelling force and free flow plug curve determines the velocity.

NOTE: Propelling force and velocity should be measured at the location of the rate control.

Useable Adjustment Setting Range
Red lines are model's maximum allowable propelling force.

Damping Force

Turn adjustment pin 1 3/4 turns open to provide minimum damping force. Turn adjustment pin fully closed to provide maximum damping force.

1. To determine the approximate adjustment setting, when the selected model, propelling force, and velocity are known, compare velocity to the propelling force in the compression and/or tension mode adjustment setting curves. The intersection point of the velocity and the propelling force is the approximate adjustment setting to be used. Adjustment lower or higher than this setting will result in slower or faster damper operation respectively.
2. To determine the velocity, when the selected model, adjustment setting, and propelling force are known, compare the propelling force to the adjustment setting in the compression and/or tension mode adjustment setting curves. The intersection point of the propelling force and the adjustment setting is the approximate velocity for the selected model. Higher velocities are obtained at higher adjustment settings and lower velocities are obtained at lower adjustment settings.
3. A 1.5mm Hex Wrench (provided) is required to adjust the unit.

NOTE: When a free flow plug is used, the intersection point of the propelling force and free flow plug curve determines the velocity.

EXAMPLE: Adjustable Double Acting Rate Control Application

Stroke required: 6 in. (152 mm)
Control direction: Tension and Compression
Propelling force: 1,000 lbs. (4 4448 N) (tension), 1,625 lbs. (7 228 N) (compression)

- Selection: ADA 715
1. Velocity: 25 in./sec. (0,635 m/s) (tension), 4 in./sec. (0,1 m/s) (compression)
- Intersection point: Adjustment setting 1 1/2 (tension), 1/2 (compression)
2. Adjustment setting: 1 1/2 (tension), 1/2 (compression)
- Velocity: 25 in./sec. (0,635 m/s) (tension), 4 in./sec. (0,1 m/s) (compression)

NOTE: Propelling force and velocity should be measured at the location of the rate control.

Remote Adjustment Cable for ADA 500 Series

ITT Enidine will custom fit a remote adjustment cable for applications where the ADA unit will be mounted in non-accessible locations. Contact ITT Enidine for more information.

Note: If rotary application, please complete application worksheet on page 104 and forward to Enidine.

Standard remote adjustment cable length is 48" (1220 mm). Optional lengths available upon request.
Note: Remote adjustment cable can be used in a single position only.

Enidine is a diversified leading manufacturer of highly engineered critical components and customized technology solutions for growing industrial end-markets in energy infrastructure, electronics, aerospace and transportation.

As part of our strategy to make the customer central to everything we do, our core technologies, engineering strength and global scale offers greater value for customers in terms of quality, cost and delivery.

Common Applications:

- Automotive
- Auto, Storage and Retrieval
- Bridges and Structures
- Conveyor Systems
- Steel Mills
- Plastic Bottle Manufacturing
- Packaging Machinery
- Overhead Cranes
- Robotics
- Electronics Cabinets
- Sub-Sea Equipment
- Medical Equipment

Enidine provides energy absorption and vibration isolation solutions to meet the challenging demands of global industrial markets.
